FRANKLIN STRATEGIC INCOME VIP FUND

Investment Goal

High level of current income. A secondary goal is long-term capital appreciation.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund. **The table and the example do not include any fees or sales charges imposed by variable insurance contracts, qualified retirement plans or funds of funds.** If they were included, your costs would be higher.

Annual Fund Operating Expenses

(expenses that you pay each year as a percentage of the value of your investment)

	Class 1
Management fees	0.63%
Distribution and service (12b-1) fees	None
Other expenses	0.15%
Acquired fund fees and expenses ¹	0.04%
Total annual Fund operating expenses ¹	0.82%
Fee waiver and/or expense reimbursement ²	-0.04%
Total annual Fund operating expenses after fee waiver and/or expense reimbursement^{1,2}	0.78%

¹ Total annual Fund operating expenses differ from the ratio of expenses to average net assets shown in the Financial Highlights, which reflect the operating expenses of the Fund and do not include acquired fund fees and expenses.

² The investment manager has contractually agreed in advance to reduce its fee for at least one year following the date of this prospectus as a result of the Fund's investment in one or more Franklin Templeton affiliated funds (acquired fund), including a Franklin Templeton money fund. Contractual fee waiver and/or expense reimbursement agreements may not be changed or terminated during the time period set forth above.

Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of the period. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. The Example reflects adjustments made to the Fund's operating expenses due to the fee waivers and/or expense reimbursements by management for the 1 Year numbers only. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 Year	3 Years	5 Years	10 Years
Class 1	\$80	\$258	\$452	\$1,011

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual Fund operating expenses or in the Example, affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 58.27% of the average value of its portfolio.

Principal Investment Strategies

Under normal market conditions, the Fund invests its assets primarily to predominantly in U.S. and foreign debt securities, including those in emerging markets. Debt securities include all varieties of fixed, variable and floating rate income securities, including bonds, U.S. and foreign government and agency securities, corporate loans (and loan participations) and mortgage-backed securities and other asset-backed securities. The Fund shifts its investments among various classes of debt securities and at any given time may have a substantial amount of its assets invested in any class of debt security.

The Fund may invest up to 100% of its assets in high yield, lower-quality debt securities (also known as "junk bonds"). The below-investment grade debt securities in which the Fund invests are generally rated at least Caa by Moody's Investors Service (Moody's) or CCC by Standard & Poor's (S&P®) or are unrated securities the Fund's investment manager determines are of comparable quality.

The Fund may invest a portion of its assets in marketplace loans to consumers and small and mid-sized enterprises or companies (SMEs), which may include loans for individual leases, that may be originated through online lending platforms.

The Fund may invest in many different securities issued or guaranteed by the U.S. government or by non-U.S. governments, or their respective agencies or instrumentalities, including mortgage-backed securities and inflation-indexed securities issued by the U.S. Treasury. Mortgage-backed securities represent an interest in a pool of mortgage loans made by banks and other financial institutions to finance purchases of homes, commercial buildings and other real estate. The individual mortgage loans are packaged or "pooled" together for sale to investors. As the underlying mortgage loans are paid off, investors receive principal and interest payments. These securities may be fixed-rate or adjustable-rate mortgage-backed securities (ARMS). The Fund may purchase or sell

mortgage-backed securities on a delayed delivery or forward commitment basis through the "to-be-announced" (TBA) market. With TBA transactions, the particular securities to be delivered must meet specified terms and standards. The Fund may also invest a small portion of its assets directly in mortgage loans.

For purposes of pursuing its investment goals, the Fund regularly enters into various currency-related transactions involving derivative instruments, including currency and cross currency forwards, currency swaps, currency and currency index futures contracts and currency options. The Fund also regularly enters into interest rate and credit-related transactions involving derivative instruments, including interest rate, fixed income total return and credit default swaps and bond/interest rate futures contracts. The use of these derivative transactions may allow the Fund to obtain net long or net short exposures to selected currencies, interest rates, countries, durations or credit risks. These derivative instruments may be used for hedging purposes, to enhance Fund returns or to obtain exposure to various market sectors.

The Fund may invest a significant portion of its assets in complex fixed income securities, such as collateralized debt obligations ("CDOs"), which are generally a type of asset-backed securities. The Fund's investments in CDOs may include investments in collateralized loan obligations (CLOs), which are a type of CDO.

The Fund's investment manager is a research driven, fundamental investor that relies on a team of analysts to provide in-depth industry expertise and uses both qualitative and quantitative analysis to evaluate issuers. The Fund's investment manager is a research driven, fundamental investor that relies on a team of analysts to provide in-depth industry expertise and uses both qualitative and quantitative analysis to evaluate issuers. The Fund uses an active allocation strategy to try to achieve its investment goals. The investment manager uses a "top-down" analysis of macroeconomic trends combined with a "bottom-up" fundamental analysis of market sectors, industries, and issuers to try to take advantage of varying sector reactions to economic events.

Principal Risks

You could lose money by investing in the Fund. Mutual fund shares are not deposits or obligations of, or guaranteed or endorsed by, any bank, and are not insured by the Federal Deposit Insurance Corporation, the Federal Reserve Board, or any other agency of the U.S. government.

Credit An issuer of debt securities may fail to make interest payments or repay principal when due, in whole or in part. Changes in an issuer's financial strength or in a security's or government's credit rating may affect a security's value.

High-Yield Debt Securities Issuers of lower-rated or "high-yield" debt securities (also known as "junk bonds") are not as strong financially as those issuing higher credit quality debt

securities. High-yield debt securities are generally considered predominantly speculative by the applicable rating agencies as their issuers are more likely to encounter financial difficulties because they may be more highly leveraged, or because of other considerations. In addition, high yield debt securities generally are more vulnerable to changes in the relevant economy, such as a recession or a sustained period of rising interest rates, that could affect their ability to make interest and principal payments when due. The prices of high-yield debt securities generally fluctuate more than those of higher credit quality. High-yield debt securities are generally more illiquid (harder to sell) and harder to value.

Interest Rate When interest rates rise, debt security prices generally fall. The opposite is also generally true: debt security prices rise when interest rates fall. Interest rate changes are influenced by a number of factors, including government policy, monetary policy, inflation expectations, perceptions of risk, and supply of and demand for bonds. In general, securities with longer maturities or durations are more sensitive to interest rate changes.

Market The market values of securities or other investments owned by the Fund will go up or down, sometimes rapidly and unpredictably. The market value of a security or other investment may be reduced by market activity or other results of supply and demand unrelated to the issuer. This is a basic risk associated with all investments. When there are more sellers than buyers, prices tend to fall. Likewise, when there are more buyers than sellers, prices tend to rise.

The current global outbreak of the novel strain of coronavirus, COVID-19, has resulted in market closures and dislocations, extreme volatility, liquidity constraints and increased trading costs. Efforts to contain the spread of COVID-19 have resulted in global travel restrictions and disruptions of healthcare systems, business operations and supply chains, layoffs, volatility in consumer demand for certain products, defaults and credit ratings downgrades, and other significant economic impacts. The effects of COVID-19 have impacted global economic activity across many industries and may heighten other pre-existing political, social and economic risks, locally or globally. The full impact of the COVID-19 pandemic is unpredictable and may adversely affect the Fund's performance.

Income The Fund's distributions to shareholders may decline when prevailing interest rates fall, when the Fund experiences defaults on debt securities it holds or when the Fund realizes a loss upon the sale of a debt security.

Variable Rate Securities Because changes in interest rates on variable rate securities (including floating rate securities) may lag behind changes in market rates, the value of such securities may decline during periods of rising interest rates until their interest rates reset to market rates. During periods of declining interest rates, because the interest rates on variable rate securities generally reset downward, their market value is unlikely to rise to the same extent as the value of comparable fixed rate securities.

Foreign Securities (non-U.S.) Investing in foreign securities typically involves more risks than investing in U.S. securities, and includes risks associated with: (i) internal and external political and economic developments – e.g., the political, economic and social policies and structures of some foreign countries may be less stable and more volatile than those in the U.S. or some foreign countries may be subject to trading restrictions or economic sanctions; (ii) trading practices – e.g., government supervision and regulation of foreign securities and currency markets, trading systems and brokers may be less than in the U.S.; (iii) availability of information – e.g., foreign issuers may not be subject to the same disclosure, accounting and financial reporting standards and practices as U.S. issuers; (iv) limited markets – e.g., the securities of certain foreign issuers may be less liquid (harder to sell) and more volatile; and (v) currency exchange rate fluctuations and policies. The risks of foreign investments may be greater in developing or emerging market countries.

Sovereign Debt Securities Sovereign debt securities are subject to various risks in addition to those relating to debt securities and foreign investments generally, including, but not limited to, the risk that a governmental entity may be unwilling or unable to pay interest and repay principal on its sovereign debt, or otherwise meet its obligations when due because of cash flow problems, insufficient foreign reserves, the relative size of the debt service burden to the economy as a whole, the government's policy towards principal international lenders such as the International Monetary Fund, or the political considerations to which the government may be subject. If a sovereign debtor defaults (or threatens to default) on its sovereign debt obligations, the indebtedness may be restructured. Some sovereign debtors have in the past been able to restructure their debt payments without the approval of some or all debt holders or to declare moratoria on payments. In the event of a default on sovereign debt, the Fund may also have limited legal recourse against the defaulting government entity.

Emerging Market Countries The Fund's investments in emerging market countries are subject to all of the risks of foreign investing generally, and have additional heightened risks due to a lack of established legal, political, business and social frameworks to support securities markets, including: delays in settling portfolio securities transactions; currency and capital controls; greater sensitivity to interest rate changes; pervasiveness of corruption and crime; currency exchange rate volatility; and inflation, deflation or currency devaluation.

Floating Rate Corporate Investments Floating rate corporate loans and corporate debt securities generally have credit ratings below investment grade and may be subject to resale restrictions. They are often issued in connection with highly leveraged transactions, and may be subject to greater credit risks than other investments including the possibility of default or bankruptcy. In addition, a secondary market in corporate loans may be subject to irregular trading activity, wide bid/ask spreads and extended trade settlement periods, which may impair the ability to accurately value

existing and prospective investments and to realize in a timely fashion the full value upon the sale of a corporate loan. A significant portion of floating rate investments may be "covenant lite" loans that may contain fewer or less restrictive constraints on the borrower or other borrower-friendly characteristics.

Mortgage Securities and Asset-Backed Securities

Mortgage securities differ from conventional debt securities because principal is paid back periodically over the life of the security rather than at maturity. The Fund may receive unscheduled payments of principal due to voluntary prepayments, refinancings or foreclosures on the underlying mortgage loans. Because of prepayments, mortgage securities may be less effective than some other types of debt securities as a means of "locking in" long-term interest rates and may have less potential for capital appreciation during periods of falling interest rates. A reduction in the anticipated rate of principal prepayments, especially during periods of rising interest rates, may increase or extend the effective maturity of mortgage securities, making them more sensitive to interest rate changes, subject to greater price volatility, and more susceptible than some other debt securities to a decline in market value when interest rates rise.

Issuers of asset-backed securities may have limited ability to enforce the security interest in the underlying assets, and credit enhancements provided to support the securities, if any, may be inadequate to protect investors in the event of default. Like mortgage securities, asset-backed securities are subject to prepayment and extension risks.

Focus To the extent that the Fund focuses on particular countries, regions, industries, sectors or types of investment from time to time, the Fund may be subject to greater risks of adverse developments in such areas of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.

Derivative Instruments The performance of derivative instruments depends largely on the performance of an underlying instrument, such as a currency, security, interest rate or index, and such instruments often have risks similar to their underlying instrument, in addition to other risks. Derivative instruments involve costs and can create economic leverage in the Fund's portfolio which may result in significant volatility and cause the Fund to participate in losses (as well as gains) in an amount that exceeds the Fund's initial investment. Other risks include illiquidity, mispricing or improper valuation of the derivative instrument, and imperfect correlation between the value of the derivative and the underlying instrument so that the Fund may not realize the intended benefits. When a derivative is used for hedging, the change in value of the derivative may also not correlate specifically with the currency, security, interest rate, index or other risk being hedged. With over-the-counter derivatives, there is the risk that the other party to the transaction will fail to perform.

Inflation The market price of debt securities generally falls as inflation increases because the purchasing power of the

future income and repaid principal is expected to be worth less when received by the Fund. Debt securities that pay a fixed rather than variable interest rate are especially vulnerable to inflation risk because variable-rate debt securities may be able to participate, over the long term, in rising interest rates which have historically corresponded with long-term inflationary trends.

Collateralized Debt Obligations (CDOs) The risks of an investment in a CDO, a type of asset backed security, and which includes CLOs, depend largely on the type of collateral held by the special purpose entity (SPE) and the tranche of the CDO in which the Fund invests and may be affected by the performance of a CDO's collateral manager. CDOs may be deemed to be illiquid and subject to the Fund's restrictions on investments in illiquid investments. In addition to the normal risks associated with debt securities and asset backed securities (e.g., interest rate risk, credit risk and default risk), CDOs carry additional risks including, but not limited to: (i) the possibility that distributions from collateral securities will not be adequate to make interest or other payments; (ii) the quality of the collateral may decline in value or quality or go into default or be downgraded; (iii) the Fund may invest in tranches of a CDO that are subordinate to other classes; and (iv) the complex structure of the security may not be fully understood at the time of investment.

Marketplace Loans Marketplace loans are subject to the risks associated with debt investments generally, including but not limited to, interest rate, credit, liquidity, high yield debt, market and income risks. Marketplace loans generally are not rated by rating agencies, are often unsecured, and are highly risky and speculative investments. Lenders and investors, such as the Fund, assume all of the credit risk on the loans they fund or purchase and there are no assurances that payments due on underlying loans will be made. In addition, investments in marketplace loans may be adversely affected if the platform operator or a third-party service provider becomes unable or unwilling to fulfill its obligations in servicing the loans. Moreover, the Fund may have limited information about the underlying marketplace loans and information provided to the platform regarding the loans and the borrowers' credit information may be incomplete, inaccurate or outdated. It also may be difficult for the Fund to sell an investment in a marketplace loan before maturity at the price at which the Fund believes the loan should be valued because these loans typically are considered by the Fund to be illiquid securities.

Currency Management Strategies Currency management strategies may substantially change the Fund's exposure to currency exchange rates and could result in losses to the Fund if currencies do not perform as the investment manager expects. In addition, currency management strategies, to the extent that they reduce the Fund's exposure to currency risks, also reduce the Fund's ability to benefit from favorable changes in currency exchange rates. Using currency management strategies for purposes other than hedging further increases the Fund's exposure to foreign investment losses. Currency markets generally are

not as regulated as securities markets. In addition, currency rates may fluctuate significantly over short periods of time, and can reduce returns.

Liquidity From time to time, the trading market for a particular security or type of security or other investments in which the Fund invests may become less liquid or even illiquid. Reduced liquidity will have an adverse impact on the Fund's ability to sell such securities or other investments when necessary to meet the Fund's liquidity needs, which may arise or increase in response to a specific economic event or because the investment manager wishes to purchase particular investments or believes that a higher level of liquidity would be advantageous. Reduced liquidity will also generally lower the value of such securities or other investments. Market prices for such securities or other investments may be relatively volatile.

LIBOR Transition The Fund invests in financial instruments that may have floating or variable rate calculations for payment obligations or financing terms based on the London Interbank Offered Rate (LIBOR), which is the benchmark interest rate at which major global banks lend to one another in the international interbank market for short-term loans. It was originally anticipated that LIBOR would be discontinued by the end of 2021 and would cease to be published after that time. Although many LIBOR rates were phased out at the end of 2021 as originally intended, a selection of widely used USD LIBOR rates will continue to be published until June 2023 in order to assist with the transition to an alternative rate. The impact of the discontinuation of LIBOR and the transition to an alternative rate on the Fund's portfolio remains uncertain. There can be no guarantee that financial instruments that transition to an alternative reference rate will retain the same value or liquidity as they would otherwise have had.

Management The Fund is subject to management risk because it is an actively managed investment portfolio. The Fund's investment manager applies investment techniques and risk analyses in making investment decisions for the Fund, but there can be no guarantee that these decisions will produce the desired results.

Cybersecurity Cybersecurity incidents, both intentional and unintentional, may allow an unauthorized party to gain access to Fund assets, Fund or customer data (including private shareholder information), or proprietary information, cause the Fund, the investment manager and/or their service providers (including, but not limited to, Fund accountants, custodians, sub-custodians, transfer agents and financial intermediaries) to suffer data breaches, data corruption or loss of operational functionality or prevent Fund investors from purchasing, redeeming or exchanging shares or receiving distributions. The investment manager has limited ability to prevent or mitigate cybersecurity incidents affecting third party service providers, and such third party service providers may have limited indemnification obligations to the Fund or investment manager. Cybersecurity incidents may result in financial losses to the Fund and its shareholders, and substantial costs may be

incurred in order to prevent any future cybersecurity incidents. Issuers of securities in which the Fund invests are also subject to cybersecurity risks, and the value of these securities could decline if the issuers experience cybersecurity incidents.

Because technology is frequently changing, new ways to carry out cyber attacks are always developing. Therefore, there is a chance that some risks have not been identified or prepared for, or that an attack may not be detected, which puts limitations on the fund's ability to plan for or respond to a cyber attack. Like other funds and business enterprises, the fund, the investment manager and their service providers are subject to the risk of cyber incidents occurring from time to time.

Performance

The following bar chart and table provide some indication of the risks of investing in the Fund. The bar chart shows changes in the Fund's performance from year to year for Class 1 shares. The table shows how the Fund's average annual returns for 1 year, 5 years, 10 years or since inception, as applicable, compare with those of a broad measure of market performance. The Fund's past

performance is not necessarily an indication of how the Fund will perform in the future.

Performance reflects all Fund expenses but does not include any fees or sales charges imposed by variable insurance contracts, qualified plans or funds of funds. If they had been included, the returns shown below would be lower. Investors should consult the variable insurance contract prospectus, or the disclosure documents for qualified plans or funds of funds for more information.

Annual Total Returns

Best Quarter:	2020, Q2	7.31%
Worst Quarter:	2020, Q1	-9.42%

As of March 31, 2022, the Fund's year-to-date return was -4.99%.

Average Annual Total Returns

For periods ended December 31, 2021

	1 Year	5 Years	10 Years
Franklin Strategic Income VIP Fund - Class 1	2.28%	3.40%	3.96%
Bloomberg US Aggregate Index (index reflects no deduction for fees, expenses or taxes)	-1.54%	3.57%	2.90%

Investment Manager

Franklin Advisers, Inc. (Advisers)

Portfolio Managers

Sonal Desai, Ph.D.

Executive Vice President and Director of Advisers and portfolio manager of the Fund since 2018.

Patricia O'Connor, CFA

Vice President of Advisers and portfolio manager of the Fund since 2016.

William Chong, CFA, FRM

Portfolio Manager of Advisers and portfolio manager of the Fund since 2019.

David Yuen, CFA, FRM

Portfolio Manager of Advisers and portfolio manager of the Fund since 2019.

ordinary income, capital gains or some combination of both) will be exempt from current taxation if left to accumulate within the variable contract. You should refer to your contract prospectus for more information on these tax consequences.

Payments to Sponsoring Insurance Companies and Other Financial Intermediaries

The Fund or its distributor (and related companies) may pay broker/dealers or other financial intermediaries (such as banks and insurance companies, or their related companies) for the sale and retention of variable contracts which offer Fund shares and/or for other services. These payments may create a conflict of interest for an intermediary or be a factor in the insurance company's decision to include the Fund as an investment option in its variable contract. For more information, ask your financial advisor, visit your intermediary's website, or consult the Contract prospectus or this Fund prospectus.

Purchase and Sale of Fund Shares

Shares of the Fund are sold to insurance companies' separate accounts (Insurers) to fund variable annuity or variable life insurance contracts and to qualified plans. Insurance companies offer variable annuity and variable life insurance products through separate accounts. Shares of the Fund may also be sold to other mutual funds, either as underlying funds in a fund of funds or in other structures. In addition, Fund shares are held by a limited number of Insurers, qualified retirement plans and, when applicable, funds of funds. Substantial withdrawals by one or more Insurers, qualified retirement plans or funds of funds could reduce Fund assets, causing total Fund expenses to become higher than the numbers shown in the fees and expenses table above.

The terms of the offering of interests in separate accounts are included in the variable annuity or variable life insurance product prospectus. The terms of offerings of funds of funds are included in those funds' prospectuses. The terms of offering of qualified retirement plans are described in their disclosure documents. Investors should consult the variable contract prospectus, fund of fund prospectus, or plan disclosure documents for more information on fees and expenses imposed by variable insurance contracts, funds of funds or qualified retirement plans, respectively.

Taxes

Because shares of the Fund are generally purchased through variable annuity contracts or variable life insurance contracts, the Fund's distributions (which the Fund expects, based on its investment goals and strategies to consist of

(THIS PAGE INTENTIONALLY LEFT BLANK)

FRANKLIN TEMPLETON VARIABLE INSURANCE PRODUCTS TRUST

Overview

Franklin Templeton Variable Insurance Products Trust (the Trust) currently consists of multiple series (Funds), offering a wide variety of investment choices. Funds may be available in multiple classes: Class 1, Class 2, Class 4 and Class 5. The classes are identical except that Class 2, Class 4 and Class 5 each has a distribution plan (see "Share Classes" under Fund Account Information). The Funds are not offered to the public; they are offered and sold only to: (1) insurance company separate accounts to serve as the underlying investment vehicle for variable contracts; (2) certain qualified plans; and (3) other funds of funds.

Investment Considerations

- The following give a general sense of the level of fund assets associated with a particular investment or strategy: "small portion" (less than 10%); "portion" (10% to 25%); "significant" (25% to 50%); "substantial" (50% to 66%); "primary" (66% to 80%); and "predominant" (80% or more). The percentages are not limitations unless specifically stated as such in this prospectus or in the Trust's Statement of Additional Information (SAI).

federally insured by the Federal Deposit Insurance Corporation, the Federal Reserve Board, or any other agency of the U.S. government. Fund shares involve investment risks, including the possible loss of principal.

- Because you could lose money by investing in a Fund, take the time to read each Fund description and consider all risks before investing.

Risks

- Fund shares are not deposits or obligations of, or guaranteed or endorsed by, any bank, and are not

Additional Information

More detailed information about each Fund, its investment policies, and its particular risks can be found in the SAI.

Investment Management

The Funds' investment managers and their affiliates manage as of March 31, 2022, \$1.48 trillion in assets, and have been in the investment management business since 1947.

(THIS PAGE INTENTIONALLY LEFT BLANK)

FRANKLIN STRATEGIC INCOME VIP FUND

Investment Goal

The Fund's principal investment goal is to earn a high level of current income. Its secondary goal is long-term capital appreciation.

Principal Investment Policies and Practices

Under normal market conditions, the Fund invests its assets primarily to predominantly in U.S. and foreign debt securities, including those in emerging markets. Debt securities include all varieties of fixed, variable and floating rate income securities, including bonds, U.S. and foreign government and agency securities, corporate loans (and loan participations), mortgage-backed securities and other asset-backed securities. The Fund shifts its investments among various classes of debt securities, and at any given time may have a substantial amount of its assets invested in any class of debt or other income producing security, including:

- High yield and investment grade corporate bonds and preferred stocks of issuers located in the U.S. and foreign countries, including emerging market countries
- Developed country (non-U.S.) government and agency bonds
- Emerging market government and agency bonds
- U.S. government and agency bonds, including inflation-indexed securities issued by the U.S. Treasury
- Corporate loans, marketplace loans and loan participations
- Mortgage-backed securities and other asset-backed securities
- Floating and variable interest rate investments (which may be issued by corporations or governments and may be asset-backed securities) which are debt securities
- Municipal securities

A debt security obligates the issuer to repay a loan of money at a future date and generally to pay interest to the security holder. Floating and variable interest rate investments are debt securities, the rate of interest on which is usually established as the sum of a base lending rate (such as the prime rate of a designated U.S. bank) plus a specified margin, and which vary with and are periodically adjusted to such base lending rate. Some of the Fund's investments may be purchased in private placements and therefore illiquid and are generally unrated by an independent rating agency.

The Fund may invest up to 100% of its assets in high yield, lower-quality debt securities (also known as "junk bonds"). These securities are either rated below investment grade or, if unrated, determined by the Fund's investment manager to

be of comparable quality. Investment grade debt securities are rated in the top four rating categories by one or more independent rating agencies such as Standard & Poor's (S&P®) and Moody's Investors Service (Moody's) or, if unrated, determined by the Fund's investment manager to be of comparable quality. The below-investment grade debt securities in which the Fund invests are generally rated at least Caa by Moody's or CCC by S&P or are unrated securities the Fund's investment manager determines are of comparable quality. However, the Fund may invest a small portion of its total assets in debt securities that are in default. Many debt securities of non-U.S. issuers, and especially emerging market issuers, are rated below investment grade or are unrated so that their selection depends on the investment manager's internal analysis.

The Fund may invest in many different securities issued or guaranteed by the U.S. government or by non-U.S. governments, or their respective agencies or instrumentalities. Government and agency bonds include debt securities of any maturity, such as bonds, notes, bills and debentures, issued or guaranteed by governments, government agencies or instrumentalities, including government-sponsored entities, supranational entities (e.g., the World Bank), and public-private partnerships.

The Fund may invest a portion of its assets in marketplace loans to consumers and small and mid-sized enterprises or companies (SMEs), which may include loans for individual leases. Marketplace loans are loans that may be originated through online lending platforms that match consumers, SMEs, and other borrowers seeking loans with investors willing to provide the funding for such loans. These borrowers may seek such loans for a variety of different purposes (e.g., loans for education, loans to fund elective medical procedures, loans for franchise financing or loans for equipment leases). The yield to the lender on a marketplace loan is the fixed interest rate assigned by the platform to the loan net of any fees charged by the platform, including servicing fees, which cover the costs of services such as screening borrowers for their eligibility, managing the supply and demand of the marketplace, and facilitating payments and debt collection, among other things. Marketplace loans are usually considered to be illiquid.

The Fund may invest in other investment companies, including exchange-traded funds, to gain exposure to certain asset classes.

The Fund also may invest, directly or through other Franklin Templeton investment funds, in corporate loans made to, or issued by, borrowers that are U.S. companies, foreign borrowers and U.S. subsidiaries of foreign borrowers, which typically have floating interest rates. Loan participations represent fractional interests in a company's indebtedness and are generally made available by banks or other institutional investors. Floating interest rates vary with and

are periodically adjusted to a generally recognized base interest rate such as LIBOR or the Prime Rate.

A mortgage-backed security is an interest in a pool of mortgage loans made by banks and other financial institutions to finance purchases of homes, commercial buildings and other real estate. The individual mortgage loans are packaged or "pooled" together for sale to investors. As the underlying mortgage loans are paid off, investors receive principal and interest payments. These securities may be fixed-rate or adjustable-rate mortgage-backed securities (ARMS). The Fund may also invest a small portion of its assets directly in mortgage loans. Many of the mortgage-backed securities in which the Fund invests are issued or guaranteed by the U.S. government, its agencies or instrumentalities, such as Ginnie Mae and U.S. government-sponsored entities (GSEs), such as Fannie Mae and Freddie Mac; others are issued by private entities. Mortgage securities issued by GSEs include credit risk transfer securities. Credit risk transfer securities are structured without any government guarantee or underlying collateral, so that (i) interest is paid directly by the GSE and (ii) principal is paid in accordance with the principal payments and default performance of a certain specified pool of residential mortgage loans acquired by the GSE. The Fund may also invest in privately issued credit risk transfer securities. The Fund may purchase or sell mortgage-backed securities on a delayed delivery or forward commitment basis through the "to-be-announced" (TBA) market. With TBA transactions, the particular securities to be delivered are not identified at the trade date but the delivered securities must meet specified terms and standards (such as yield, duration, and credit quality).

Government agency or instrumentality issues have different levels of credit support. Ginnie Mae pass-through mortgage certificates are backed by the full faith and credit of the U.S. government. **U.S. government-sponsored entities, such as Fannie Mae and Freddie Mac, may be chartered by Acts of Congress, but their securities are neither issued nor guaranteed by the U.S. government. Although the U.S. government has provided financial support to Fannie Mae and Freddie Mac, no assurance can be given that the U.S. government will continue to do so.** Accordingly, securities issued by Fannie Mae and Freddie Mac may involve a greater risk of non-payment of principal and interest. Investors should remember that guarantees of timely repayment of principal and interest do not apply to the market prices and yields of the securities or to the net asset value or performance of the Fund, which will vary with changes in interest rates and other market conditions.

The Fund may invest in collateralized debt obligations (CDOs), which are generally types of asset-backed securities. Collateralized bond obligations (CBOs) and collateralized loan obligations (CLOs) are generally considered two types of CDOs. CBOs represent interests in a special purpose, bankruptcy-remote vehicle, typically a trust, collateralized by a pool of fixed income securities, some of which may be below investment grade, including commercial mortgage-backed securities, residential

mortgage-backed securities, corporate bonds and emerging market debt securities. CLOs are similar to CBOs except that the underlying pool for a CLO is generally comprised of corporate and/or sovereign loans, which may include, among others, senior secured loans, senior unsecured loans, and subordinate corporate loans made to domestic and foreign borrowers, including loans that may be rated below investment grade or equivalent unrated loans. For the broader category of CDOs, the pool of debt instruments held by a trust may include debt instruments of any type, including mortgage-backed or other asset-backed securities issued in securitization transactions. In all types of CDOs, the interests in the trust are split into two or more portions, called tranches, varying in risk, maturity, payment priority and yield. The riskiest portion is the "equity" tranche, which is the first loss position to observe defaults from the collateral in the trust. Because they are partially protected from defaults, senior tranches of a CDO trust typically have higher ratings and lower yields than the underlying collateral securities held by the trust and can be rated investment grade. The Fund may invest in any tranche of a CDO excluding the "equity" tranche.

For purposes of pursuing its investment goals, the Fund regularly enters into currency-related transactions involving derivative instruments, including currency and cross currency forwards, currency swaps, currency and currency index futures contracts, and currency options. The Fund also regularly enters into interest rate and credit-related transactions involving certain derivative instruments, including interest rate, credit default and fixed income total return swaps and interest rate and/or bond futures contracts (including U.S. Treasury futures contracts) and options thereon. The use of such derivative transactions may allow the Fund to obtain net long or net short exposures to selected currencies, interest rates, countries, durations or credit risks. The Fund may use currency, interest rate or credit-related or other derivative strategies for the purposes of enhancing Fund returns, increasing liquidity, gaining exposure to particular instruments in more efficient or less expensive ways and/or hedging risks relating to changes in currency exchange rates, credit risks, interest rates and other market factors.

The investment manager considers various factors, such as availability and cost, in deciding whether, when and to what extent to enter into derivative transactions.

By way of example, when the investment manager believes that the value of a particular foreign currency is expected to increase compared to the U.S. dollar, the Fund could enter into a forward contract to purchase that foreign currency at a future date. If at such future date the value of the foreign currency exceeds the then current amount of the U.S. dollars to be paid by the Fund under the contract, the Fund will recognize a gain. Conversely, if the value of the foreign currency is less than the current amount of the U.S. dollars to be paid by the Fund under the contract, the Fund will recognize a loss. When used for hedging purposes, a forward contract or other currency-related derivative instrument could be used to protect against possible

declines in a currency's value where a security held or to be purchased by the Fund is denominated in that currency, or it may be used to hedge the Fund's position by entering into a transaction on another currency expected to perform similarly to the currency of the security held or to be purchased (a "proxy hedge").

A currency forward contract is an obligation to purchase or sell a specific foreign currency in exchange for another currency, which may be U.S. dollars, at an agreed exchange rate (price) at a future date. Currency forwards are typically individually negotiated and privately traded by currency traders and their customers in the interbank market. A cross currency forward is a forward contract to sell a specific foreign currency in exchange for another foreign currency and may be used when the Fund believes that the price of one of those foreign currencies will experience a substantial movement against the other foreign currency. A currency forward will tend to reduce or eliminate exposure to the currency that is sold, and increase exposure to the currency that is purchased, similar to when the Fund sells a security denominated in one currency and purchases a security denominated in another currency. When used for hedging purposes, a currency forward should help to protect the Fund against losses resulting from a decline in the hedged currency, but will cause the Fund to assume the risk of fluctuations in the value of the currency it purchases.

A futures contract is a standard binding agreement that trades on an exchange to buy or sell a specified quantity of an underlying instrument or asset at a specified price at a specified later date. A "sale" of a futures contract means the acquisition of a contractual obligation to deliver the underlying instrument called for by the contract at a specified price on a specified date. A "purchase" of a futures contract means the acquisition of a contractual obligation to acquire a specified quantity of the underlying instrument called for by the contract at a specified price on a specified date. The purchase or sale of a futures contract will allow the Fund to increase or decrease its exposure to the underlying instrument or asset. Although most futures contracts used by the Fund allow for a cash payment of the net gain or loss on the contract at maturity in lieu of delivery of the underlying instruments, some require the actual delivery or acquisition of the underlying instrument or asset. The Fund may buy and sell futures contracts that trade on U.S. and foreign exchanges.

Swap agreements, such as interest rate, fixed income total return, currency, inflation index and credit default swaps, are contracts between the Fund and another party (the swap counterparty) involving the exchange of payments on specified terms over periods ranging from a few days to multiple years. A swap agreement may be negotiated bilaterally and traded over-the-counter (OTC) between the two parties (for an uncleared swap) or, in some instances, must be transacted through a futures commission merchant (FCM) and cleared through a clearinghouse that serves as a central counterparty (for a cleared swap). In a basic swap transaction, the Fund agrees with the swap counterparty to exchange the returns (or differentials in rates of return)

and/or cash flows earned or realized on a particular "notional amount" of underlying instruments. The notional amount is the set amount selected by the parties as the basis on which to calculate the obligations that they have agreed to exchange. The parties typically do not actually exchange the notional amount. Instead, they agree to exchange the returns that would be earned or realized if the notional amount were invested in given instruments or at given interest rates.

For credit default swaps, the "buyer" of the credit default swap agreement is obligated to pay the "seller" a periodic stream of payments over the term of the agreement in return for a payment by the seller that is contingent upon the occurrence of a credit event with respect to an underlying reference debt obligation. The buyer of the credit default swap is purchasing the obligation of its counterparty to offset losses the buyer could experience if there was such a credit event. Generally, a credit event means bankruptcy, failure to timely pay interest or principal, obligation acceleration or default, or repudiation or restructuring of the reference debt obligation. The contingent payment by the seller generally is either the face amount of the reference debt obligation in exchange for the physical delivery of the reference debt obligation or a cash payment equal to the decrease in market value of the reference debt obligation following the occurrence of the credit event.

An interest rate swap is an agreement between two parties to exchange interest rate payment obligations. Typically, one rate is based on an interest rate fixed to maturity while the other is based on an interest rate that changes in accordance with changes in a designated benchmark (for example, LIBOR, prime, commercial paper, or other benchmarks).

A currency swap is generally a contract between two parties to exchange one currency for another currency at the start of the contract and then exchange periodic floating or fixed rates during the term of the contract based upon the relative value differential between the two currencies. Unlike other types of swaps, currency swaps typically involve the delivery of the entire principal (notional) amounts of the two currencies at the time the swap is entered into. At the end of the swap contract, the parties receive back the principal amounts of the two currencies.

A total return swap is an agreement between two parties, pursuant to which one pays (and the other receives) an amount equal to the total return (including, typically, income and capital gains distributions, principal prepayment or credit losses) of an underlying reference asset (e.g., a note, bond or securities index) in exchange for a regular payment, at a floating rate based on LIBOR, or alternatively at a fixed rate or the total rate of return on another financial instrument. The Fund may take either position in a total return swap (i.e., the Fund may receive or pay the total return on the underlying reference asset).

The Fund may invest in mortgage dollar rolls. In a mortgage dollar roll, the Fund sells mortgage-backed securities for delivery in the current month and simultaneously contracts to

repurchase substantially similar (same type, coupon, and maturity) securities on a specified future date. During the period between the sale and repurchase, the Fund forgoes principal and interest paid on the mortgage-backed securities. The Fund earns money on a mortgage dollar roll from any difference between the sale price and the future purchase price, as well as the interest earned on the cash proceeds of the initial sale.

Portfolio Selection

The Fund uses an active asset allocation strategy to try to achieve its investment goals. This means the Fund actively purchases and sells securities and other investments in various market sectors based on the investment manager's ongoing assessment of changing economic, global market, industry, and issuer conditions. The Fund may seek to quickly and efficiently shift its exposure among various classes of debt securities, including through derivative instruments and exchange-traded funds, and at any given time may have substantial amount of exposure to any class of debt or other income-producing investment. The Fund's investment manager is a research driven, fundamental investor that relies on a team of analysts to provide in-depth industry expertise and uses both qualitative and quantitative analysis to evaluate issuers. The investment manager uses a "top-down" analysis of macroeconomic trends combined with a "bottom-up" fundamental analysis of market sectors, industries, and issuers to try to take advantage of varying sector reactions to economic events. The investment manager will evaluate country risk, business cycles, yield curves, and values between and within markets.

The Fund's ability to achieve its investment goals depends in part upon the investment manager's skill in determining the Fund's asset allocation mix and sector weightings. There can be no assurance that the investment manager's analysis of the outlook for the economy and the business cycle will be correct.

Alongside traditional financial and economic analyses, the investment manager assesses the potential impacts of material environmental, social and governance (ESG) factors on a company, which the investment manager believes provide a measure of the company's sustainability. In analyzing ESG factors, the investment manager assesses whether a company's practices pose a material financial risk or opportunity. Consideration of ESG factors and risks is only one component of the investment manager's assessment of eligible investments and may not be a determinative factor in the investment manager's final decision on whether to invest in a company. In addition, the weight given to ESG factors may vary across types of investments, industries, regions and issuers; ESG factors and weights considered may change over time; and not every ESG factor may be identified or evaluated.

Exclusion of Investment Manager from Commodity Pool Operator Definition

With respect to the Fund, the investment manager has claimed an exclusion from the definition of "commodity pool

operator" (CPO) under the Commodity Exchange Act (CEA) and the rules of the Commodity Futures Trading Commission (CFTC) and, therefore, is not subject to CFTC registration or regulation as a CPO. In addition, with respect to the Fund, the investment manager is relying upon a related exclusion from the definition of "commodity trading advisor" (CTA) under the CEA and the rules of the CFTC.

The terms of the CPO exclusion require the Fund, among other things, to adhere to certain limits on its investments in commodity futures, commodity options and swaps, which in turn include non-deliverable currency forward contracts, as further described in the Fund's Statement of Additional Information (SAI). Because the investment manager and the Fund intend to comply with the terms of the CPO exclusion, the Fund may, in the future, need to adjust its investment strategies, consistent with its investment goal, to limit its investments in these types of instruments. The Fund is not intended as a vehicle for trading in the commodity futures, commodity options, or swaps markets. The CFTC has neither reviewed nor approved the investment manager's reliance on these exclusions, or the Fund, its investment strategies or this prospectus.

Temporary Investments

When the investment manager believes market or economic conditions are unfavorable for investors, the investment manager may invest up to 100% of the Fund's assets in a temporary defensive manner by holding all or a substantial portion of its assets in cash, cash equivalents or other high quality short-term investments. Temporary defensive investments generally may include short-term U.S. government securities, high grade commercial paper, bank obligations, repurchase agreements, money market fund shares (including shares of an affiliated money market fund), and other money market instruments. The investment manager also may invest in these types of securities or hold cash while looking for suitable investment opportunities or to maintain liquidity or to segregate on the Fund's books in connection with its derivative strategies, such as forward currency, currency or interest rate futures positions. In these circumstances, the Fund may be unable to achieve its investment goals.

Principal Risks

Credit

The Fund could lose money on a debt security if the issuer or borrower is unable or fails to meet its obligations, including failing to make interest payments and/or to repay principal when due. Changes in an issuer's financial strength, the market's perception of the issuer's financial strength or an issuer's or security's credit rating, which reflects a third party's assessment of the credit risk presented by a particular issuer or security, may affect debt securities' values. The Fund may incur substantial losses on debt securities that are inaccurately perceived to present a different amount of credit risk by the market, the investment

manager or the rating agencies than such securities actually do.

High-Yield Debt Securities

High-yield debt securities (including loans) and unrated securities of similar credit quality (high-yield debt instruments or junk bonds) involve greater risk of a complete loss of the Fund's investment, or delays of interest and principal payments, than higher-quality debt securities or loans. Issuers of high-yield debt instruments are not as strong financially as those issuing securities of higher credit quality. High-yield debt instruments are generally considered predominantly speculative by the applicable rating agencies as these issuers are more likely to encounter financial difficulties because they may be more highly leveraged, or because of other considerations. In addition, high yield debt securities generally are more vulnerable to changes in the relevant economy, such as a recession or a sustained period of rising interest rates, that could affect their ability to make interest and principal payments when due. If an issuer stops making interest and/or principal payments, payments on the securities may never resume. These instruments may be worthless and the Fund could lose its entire investment.

The prices of high-yield debt instruments generally fluctuate more than higher-quality securities. Prices are especially sensitive to developments affecting the issuer's business or operations and to changes in the ratings assigned by rating agencies. In addition, the entire high-yield debt market can experience sudden and sharp price swings due to changes in economic conditions, stock market activity, large sustained sales by major investors, a high-profile default, or other factors. Prices of corporate high-yield debt instruments often are closely linked with the company's stock prices and typically rise and fall in response to factors that affect stock prices.

High-yield debt instruments are generally less liquid than higher-quality securities. Many of these securities are not registered for sale under the federal securities laws and/or do not trade frequently. When they do trade, their prices may be significantly higher or lower than expected. At times, it may be difficult to sell these securities promptly at an acceptable price, which may limit the Fund's ability to sell securities in response to specific economic events or to meet redemption requests. As a result, certain high-yield debt instruments generally pose greater illiquidity and valuation risks.

Substantial declines in the prices of high-yield debt instruments can dramatically increase the yield of such instruments. The decline in market prices generally reflects an expectation that the issuer(s) may be at greater risk of defaulting on the obligation to pay interest and principal when due. Therefore, substantial increases in yield may reflect a greater risk by the Fund of losing some or part of its investment rather than reflecting any increase in income from the higher yield that the debt instrument may pay to the Fund on its investment.

Interest Rate

Interest rate changes can be sudden and unpredictable, and are influenced by a number of factors, including government policy, monetary policy, inflation expectations, perceptions of risk, and supply of and demand for bonds. Changes in government or central bank policy, including changes in tax policy or changes in a central bank's implementation of specific policy goals, may have a substantial impact on interest rates. There can be no guarantee that any particular government or central bank policy will be continued, discontinued or changed, nor that any such policy will have the desired effect on interest rates. Debt securities generally tend to lose market value when interest rates rise and increase in value when interest rates fall. A rise in interest rates also has the potential to cause investors to rapidly sell fixed income securities. A substantial increase in interest rates may also have an adverse impact on the liquidity of a debt security, especially those with longer maturities or durations. Securities with longer maturities or durations or lower coupons or that make little (or no) interest payments before maturity tend to be more sensitive to interest rate changes. During low interest rate environments, the risk that interest rates will rise is increased. Such increases may expose fixed income markets to heightened volatility and reduced liquidity for certain fixed income investments, particularly those with longer maturities.

Market

The market values of securities or other investments owned by the Fund will go up or down, sometimes rapidly or unpredictably. The Fund's investments may decline in value due to factors affecting individual issuers (such as the results of supply and demand), or sectors within the securities markets. The value of a security or other investment also may go up or down due to general market conditions that are not specifically related to a particular issuer, such as real or perceived adverse economic conditions, changes in interest rates or exchange rates, or adverse investor sentiment generally. In addition, unexpected events and their aftermaths, such as the spread of diseases; natural, environmental or man-made disasters; financial, political or social disruptions; terrorism and war; and other tragedies or catastrophes, can cause investor fear and panic, which can adversely affect the economies of many companies, sectors, nations, regions and the market in general, in ways that cannot necessarily be foreseen. During a general downturn in the securities markets, multiple asset classes may decline in value. When markets perform well, there can be no assurance that securities or other investments held by the Fund will participate in or otherwise benefit from the advance.

The current global outbreak of the novel strain of coronavirus, COVID-19, has resulted in market closures and dislocations, extreme volatility, liquidity constraints and increased trading costs. Efforts to contain the spread of COVID-19 have resulted in global travel restrictions and disruptions of healthcare systems, business operations and supply chains, layoffs, volatility in consumer demand for

certain products, defaults and credit ratings downgrades, and other significant economic impacts. The effects of the COVID-19 pandemic have impacted global economic activity across many industries and may heighten other pre-existing political, social and economic risks, locally or globally. The full impact of the COVID-19 pandemic, and other epidemics and pandemics that may arise in the future, on national and global economies, individual companies and the financial markets is unpredictable, may result in a high degree of uncertainty for potentially extended periods of time and may adversely affect the Fund's performance.

Income

The Fund's distributions to shareholders may decline when prevailing interest rates fall, when the Fund experiences defaults on debt securities it holds or when the Fund realizes a loss upon the sale of a debt security. The Fund's income generally declines during periods of falling benchmark interest rates because the Fund must reinvest the proceeds it receives from existing investments (upon their maturity, prepayment, amortization, sale, call, or buy-back) at a lower rate of interest or return.

Variable Rate Securities

Variable rate securities (which include floating rate debt securities) generally are less price sensitive to interest rate changes than fixed rate debt securities. However, the market value of variable rate debt securities may decline or not appreciate as quickly as expected when prevailing interest rates rise if the interest rates of the variable rate securities do not rise as much, or as quickly, as interest rates in general. Conversely, variable rate securities will not generally increase in market value if interest rates decline. When interest rates fall, there may be a reduction in the payments of interest received by the Fund from its variable rate securities.

Foreign Securities (non-U.S.)

Investing in foreign securities including sovereign debt securities typically involves more risks than investing in U.S. securities. Certain of these risks also may apply to securities of U.S. companies with significant foreign operations.

Currency exchange rates. Foreign securities may be issued and traded in foreign currencies. As a result, their market values in U.S. dollars may be affected by changes in exchange rates between such foreign currencies and the U.S. dollar, as well as between currencies of countries other than the U.S. For example, if the value of the U.S. dollar goes up compared to a foreign currency, an investment traded in that foreign currency will go down in value because it will be worth fewer U.S. dollars. The Fund accrues additional expenses when engaging in currency exchange transactions, and valuation of the Fund's foreign securities may be subject to greater risk because both the currency (relative to the U.S. dollar) and the security must be considered.

Currency management strategies. Currency management strategies may substantially change the Fund's exposure to

currency exchange rates and could result in losses to the Fund if currencies do not perform as the investment manager expects. In addition, currency management strategies, to the extent that they reduce the Fund's exposure to currency risks, also reduce the Fund's ability to benefit from favorable changes in currency exchange rates. There is no assurance that the investment manager's use of currency management strategies will benefit the Fund or that they will be, or can be, used at appropriate times. Furthermore, there may not be perfect correlation between the amount of exposure to a particular currency and the amount of securities in the Fund's portfolio denominated in that currency. Investing in foreign currencies for purposes of gaining from projected changes in exchange rates, as opposed to hedging currency risks applicable to the Fund's holdings, further increases the Fund's exposure to foreign investment losses.

Political and economic developments. The political, economic and social policies or structures of some foreign countries may be less stable and more volatile than those in the United States. Investments in these countries may be subject to greater risks of internal and external conflicts, expropriation, nationalization of assets, foreign exchange controls (such as suspension of the ability to transfer currency from a given country), restrictions on removal of assets, political or social instability, military action or unrest, diplomatic developments, currency devaluations, foreign ownership limitations, and substantial, punitive or confiscatory tax increases. It is possible that a government may take over the assets or operations of a company or impose restrictions on the exchange or export of currency or other assets. Some countries also may have different legal systems that may make it difficult or expensive for the Fund to vote proxies, exercise shareholder rights, and pursue legal remedies with respect to its foreign investments. Diplomatic and political developments could affect the economies, industries, and securities and currency markets of the countries in which the Fund is invested. These developments include rapid and adverse political changes; social instability; regional conflicts; sanctions imposed by the United States, other nations or other governmental entities, including supranational entities; terrorism; and war. In addition, such developments could contribute to the devaluation of a country's currency, a downgrade in the credit ratings of issuers in such country, or a decline in the value and liquidity of securities of issuers in that country. An imposition of sanctions upon, or other government actions impacting, certain issuers in a country could result in (i) an immediate freeze of that issuer's securities, impairing the ability of the Fund to buy, sell, receive or deliver those securities or (ii) other limitations on the Fund's ability to invest or hold such securities. These factors would affect the value of the Fund's investments and are extremely difficult, if not impossible, to predict and take into account with respect to the Fund's investments.

Sovereign debt securities. Sovereign debt securities are subject to various risks in addition to those relating to debt securities and foreign securities generally, including, but not

limited to, the risk that a governmental entity may be unwilling or unable to pay interest and repay principal on its sovereign debt, or otherwise meet its obligations when due because of cash flow problems, insufficient foreign reserves, the relative size of the debt service burden to the economy as a whole, the government's policy towards principal international lenders such as the International Monetary Fund, or the political considerations to which the government may be subject. Sovereign debtors also may be dependent on expected disbursements from other foreign governments or multinational agencies and the country's access to, or balance of, trade. If a sovereign debtor defaults (or threatens to default) on its sovereign debt obligations, the indebtedness may be restructured. Restructuring may include obtaining additional credit to finance outstanding obligations, reduction and rescheduling of payments of interest and principal, or negotiation of new or amended credit and security agreements. Unlike most corporate debt restructurings, the fees and expenses of financial and legal advisers to the creditors in connection with a restructuring may be borne by the holders of the sovereign debt securities instead of the sovereign entity itself. Some sovereign debtors have in the past been able to restructure their debt payments without the approval of some or all debt holders or to declare moratoria on payments, and similar occurrences may happen in the future.

In the event of a default on sovereign debt, the Fund may have limited legal recourse against the defaulting government entity. As a sovereign entity, the issuing government may be immune from lawsuits in the event of its failure or refusal to pay the obligations when due, and any rights the Fund may have may be restricted pursuant to the terms of applicable treaties with such sovereign entity. If a sovereign entity defaults, it may request additional time in which to pay or for further loans. There may be no legal process for collecting principal or interest payments on sovereign debt that a government does not pay or such legal process may be relatively more expensive, nor are there bankruptcy proceedings by which the Fund may collect in whole or in part on debt issued by a sovereign entity. In certain cases, remedies must be pursued in the courts located in the country of the defaulting sovereign entity itself, which may further limit the Fund's ability to obtain recourse.

Trading practices. Brokerage commissions, withholding taxes, custodial fees, and other fees generally are higher in foreign markets. The policies and procedures followed by foreign stock exchanges, currency markets, trading systems and brokers may differ from those applicable in the United States, with possibly negative consequences to the Fund. The procedures and rules governing foreign trading, settlement and custody (holding of the Fund's assets) also may result in losses or delays in payment, delivery or recovery of money or other property. Foreign government supervision and regulation of foreign securities and currency markets and trading systems may be less than or different from government supervision in the United States, and may increase the Fund's regulatory and compliance burden and/or decrease the Fund's investor rights and protections.

Availability of information. Foreign issuers may not be subject to the same disclosure, accounting, auditing and financial reporting standards and practices as U.S. issuers. Thus, there may be less information publicly available about foreign issuers than about most U.S. issuers. In addition, information provided by foreign issuers may be less timely or less reliable than information provided by U.S. issuers.

Limited markets. Certain foreign securities may be less liquid (harder to sell) and their prices may be more volatile than many U.S. securities. Illiquidity tends to be greater, and valuation of the Fund's foreign securities may be more difficult, due to the infrequent trading and/or delayed reporting of quotes and sales.

Regional. Adverse conditions in a certain region or country can adversely affect securities of issuers in other countries whose economies appear to be unrelated. To the extent that the Fund invests a significant portion of its assets in a specific geographic region or a particular country, the Fund will generally have more exposure to the specific regional or country economic risks. In the event of economic or political turmoil or a deterioration of diplomatic relations in a region or country where a substantial portion of the Fund's assets are invested, the Fund may experience substantial illiquidity or reduction in the value of the Fund's investments.

Risks Related to Russia's Invasion of Ukraine. Russia's military invasion of Ukraine in February 2022, the resulting responses by the United States and other countries, and the potential for wider conflict could increase volatility and uncertainty in the financial markets and adversely affect regional and global economies. The United States and other countries have imposed broad-ranging economic sanctions on Russia and certain Russian individuals, banking entities and corporations as a response to its invasion of Ukraine. The United States and other countries have also imposed economic sanctions on Belarus and may impose sanctions on other countries that support Russia's military invasion. These sanctions, as well as any other economic consequences related to the invasion, such as additional sanctions, boycotts or changes in consumer or purchaser preferences or cyberattacks on governments, companies or individuals, may further decrease the value and liquidity of certain Russian securities and securities of issuers in other countries that are subject to economic sanctions related to the invasion. To the extent that the fund has exposure to Russian investments or investments in countries affected by the invasion, the fund's ability to price, buy, sell, receive or deliver such investments may be impaired. The fund could determine at any time that certain of the most affected securities have zero value. In addition, any exposure that the fund may have to counterparties in Russia or in countries affected by the invasion could negatively impact the fund's portfolio. The extent and duration of Russia's military actions and the repercussions of such actions (including any retaliatory actions or countermeasures that may be taken by those subject to sanctions) are impossible to predict, but could result in significant market disruptions, including in the oil and natural gas markets, and may negatively affect global supply chains, inflation and global growth. These and any

related events could significantly impact the fund's performance and the value of an investment in the fund, even beyond any direct exposure the fund may have to Russian issuers or issuers in other countries affected by the invasion.

Emerging Markets

The risks of foreign investments typically are greater in less developed countries, sometimes referred to as developing or emerging markets. For example, the political, social, market regulation and economic structures and institutions in these countries, including those supporting the regulatory and legal systems and financial markets, may be less established and more vulnerable to corruption and fraud, and may change rapidly. These countries are more likely to experience high levels of inflation, deflation or currency devaluation, which can harm their economies and securities markets and increase volatility. In fact, short-term volatility in these markets and declines of 50% or more are not uncommon. Investments in less developed markets generally are subject to higher fees and expenses and exhibit greater price volatility and valuation challenges. They may be subject to greater risk of expropriation, nationalization, confiscatory or punitive taxation, and foreign investment and divestment restrictions. In addition, a developing market country may experience a devaluation of its currency, a downgrade in the credit ratings of issuers in the country, or a decline in the value and liquidity of securities of issuers in that country if the United States, other nations or other governmental entities (including supranational entities) impose sanctions on issuers that limit or restrict foreign investment, the movement of assets or other economic activity in the country due to political, military or regional conflicts or due to terrorism or war.

Restrictions on currency trading that may be imposed by developing market countries will have an adverse effect on the value of the securities of companies that trade or operate in such countries. Finally, such securities markets are smaller, relatively less liquid and may not be as efficient or established in terms of settlement, custody and securities registration.

Floating Rate Corporate Investments

Certain corporate loans may not be considered "securities," and investors, such as the Fund, therefore may not be entitled to rely on the antifraud protections of the federal securities laws and may have limited legal remedies.

The senior secured corporate loans and corporate debt securities in which the Fund invests are often issued in connection with highly leveraged transactions. Such transactions include leveraged buyout loans, leveraged recapitalization loans, and other types of acquisition financing. Loan investments issued in such transactions are subject to greater credit risks than other investments including a greater possibility that the borrower may default or enter bankruptcy. Such floating rate investments may be rated below investment grade (i.e., also known as "junk

bonds"). Although loan investments are generally subject to certain restrictive covenants in favor of the investors, many of these loans may from time to time be reissued or offered as "covenant lite" loans, which may entail potentially increased risk, because they may have fewer or no financial maintenance covenants or restrictions that would normally allow for early intervention and proactive mitigation of credit risk.

In the event of a breach of a covenant in non-covenant lite loans or debt securities, lenders may have the ability to intervene and either prevent or restrict actions that may potentially compromise the company's ability to pay or lenders may be in a position to obtain concessions from the borrowers in exchange for a waiver or amendment of the specific covenant(s). In contrast, covenant lite loans do not always or necessarily offer the same ability to intervene or obtain additional concessions from borrowers. This risk is offset to varying degrees by the fact that the same financial and performance information may be available with or without covenants to lenders and the public alike and can be used to detect such early warning signs as deterioration of a borrower's financial condition or results. With such information, the portfolio managers are normally able to take appropriate actions without the help of covenants in the loans or debt securities. Covenant lite corporate loans and debt securities, however, may foster a capital structure designed to avoid defaults by giving borrowers or issuers increased financial flexibility when they need it the most.

No active trading market may exist for some corporate loans and some corporate loans may be subject to restrictions on resale. A secondary market in corporate loans may be subject to irregular trading activity, wide bid/ask spreads and extended trade settlement periods, which may impair the ability to accurately value existing and prospective investments and to realize in a timely fashion the full value upon the sale of a corporate loan. In addition, the Fund may not be able to readily sell its corporate loans at prices that approximate those at which the Fund could sell such loans if they were more widely held and traded. As a result of such potential illiquidity, the Fund may have to sell other investments or engage in borrowing transactions if necessary to raise cash to meet its obligations.

From time to time, the investment manager may elect to receive material non-public information (MNPI) about an individual loan that is not available to other lenders of such loan who may be unwilling to enter into a non-disclosure agreement (NDA) with the borrower or company and restrict themselves from trading in the loan for a specified period of time. If the Fund elects to become restricted on any individual loan as a result of agreeing to receive MNPI about the loan and signing an NDA, such loan will be deemed illiquid and the Fund might be unable to enter into a transaction in a security of that borrower until the MNPI is made public, when it would otherwise be advantageous to do so.

Mortgage Securities and Asset-Backed Securities

Mortgage securities differ from conventional debt securities because principal is paid back over the life of the security rather than at maturity. The Fund may receive unscheduled prepayments of principal due to voluntary prepayments, refinancing or foreclosure on the underlying mortgage loans. To the Fund this means a loss of anticipated interest, and a portion of its principal investment represented by any premium the Fund may have paid. Mortgage prepayments generally increase when interest rates fall. Because of prepayments, mortgage securities may be less effective than some other types of debt securities as a means of "locking in" long-term interest rates and may have less potential for capital appreciation during periods of falling interest rates. When the Fund reinvests the prepayments of principal it receives, it may receive a rate of interest that is lower than the rate on the existing security.

Mortgage securities also are subject to extension risk. An unexpected rise in interest rates could reduce the rate of prepayments on mortgage securities and extend their life. This could cause the price of the mortgage securities and the Fund's share price to fall and would make the mortgage securities more sensitive to interest rate changes.

Since September 2008, the Federal Housing Finance Agency (FHFA), an agency of the U.S. government, has acted as the conservator to operate Fannie Mae and Freddie Mac until they are stabilized. It is unclear how long the conservatorship will last or what effect this conservatorship will have on the securities issued or guaranteed by Fannie Mae or Freddie Mac for the long-term.

Issuers of asset-backed securities may have limited ability to enforce the security interest in the underlying assets, and credit enhancements provided to support the securities, if any, may be inadequate to protect investors in the event of default. Like mortgage securities, asset-backed securities are subject to prepayment and extension risks.

Focus

The greater the Fund's exposure to any single type of investment – including investment in a given industry, sector, region, country, issuer, or type of security – the greater the losses the Fund may experience upon any single economic, market, business, political, regulatory, or other occurrence. As a result, there may be more fluctuation in the price of the Fund's shares.

Derivative Instruments

The performance of derivative instruments depends largely on the performance of an underlying instrument, such as a currency, security, interest rate or index, and such instruments often have risks similar to the underlying instrument, in addition to other risks. Derivative instruments involve costs and can create economic leverage in the Fund's portfolio, which may result in significant volatility and cause the Fund to participate in losses (as well as gains) in an amount that significantly exceeds the Fund's initial investment. Other risks include illiquidity, mispricing or

improper valuation of the derivative instrument, and imperfect correlation between the value of the derivative and the underlying instrument so that the Fund may not realize the intended benefits. Their successful use will usually depend on the investment manager's ability to accurately forecast movements in the market relating to the underlying instrument. Should a market or markets, or prices of particular classes of investments move in an unexpected manner, especially in unusual or extreme market conditions, the Fund may not realize the anticipated benefits of the transaction, and it may realize losses, which could be significant. If the investment manager is not successful in using such derivative instruments, the Fund's performance may be worse than if the investment manager did not use such derivative instruments at all. When a derivative is used for hedging, the change in value of the derivative instrument also may not correlate specifically with the currency, security, interest rate, index or other risk being hedged. There is also the risk, especially under extreme market conditions, that an instrument, which usually would operate as a hedge, provides no hedging benefits at all.

Use of these instruments could also result in a loss if the counterparty to the transaction does not perform as promised, including because of such counterparty's bankruptcy or insolvency. This risk is heightened with respect to over-the-counter (OTC) instruments, such as certain swap agreements, and may be greater during volatile market conditions. Other risks include the inability to close out a position because the trading market becomes illiquid (particularly in the OTC markets) or the availability of counterparties becomes limited for a period of time. In addition, the presence of speculators in a particular market could lead to price distortions. To the extent that the Fund is unable to close out a position because of market illiquidity, the Fund may not be able to prevent further losses of value in its derivatives holdings and the Fund's liquidity may be impaired to the extent that it has a substantial portion of its otherwise liquid assets marked as segregated to cover its obligations under such derivative instruments. Some derivatives can be particularly sensitive to changes in interest rates or other market prices. Investors should bear in mind that, while the Fund intends to use derivative strategies on a regular basis, it is not obligated to actively engage in these transactions, generally or in any particular kind of derivative, if the investment manager elects not to do so due to availability, cost or other factors.

Many swaps currently are, and others eventually are expected to be, required to be cleared through a central counterparty. Central clearing is designed to reduce counterparty credit risk and increase liquidity compared to OTC swaps, but it does not eliminate those risks completely. With cleared swaps, there is also a risk of loss by the Fund of its initial and variation margin deposits in the event of bankruptcy of the futures commission merchant (FCM) with which the Fund has an open position, or the central counterparty in a swap contract. With cleared swaps, the Fund may not be able to obtain as favorable terms as it would be able to negotiate for a bilateral, uncleared swap. In

addition, an FCM may unilaterally amend the terms of its agreement with the Fund, which may include the imposition of position limits or additional margin requirements with respect to the Fund's investment in certain types of swaps. The regulation of cleared and uncleared swaps, as well as other derivatives, is a rapidly changing area of law and is subject to modification by government and judicial action. In addition, the SEC, Commodity Futures Trading Commission (CFTC) and the exchanges are authorized to take extraordinary actions in the event of a market emergency. It is not possible to predict fully the effects of current or future regulation.

The use of derivative strategies may also have a tax impact on the Fund. The timing and character of income, gains or losses from these strategies could impair the ability of the investment manager to use derivatives when it wishes to do so.

Inflation

The market price of debt securities generally falls as inflation increases because the purchasing power of the future income and repaid principal is expected to be worth less when received by the Fund. Debt securities that pay a fixed rather than variable interest rate are especially vulnerable to inflation risk because variable-rate debt securities may be able to participate, over the long term, in rising interest rates which have historically corresponded with long-term inflationary trends.

Collateralized Debt Obligations (CDOs)

The risks of an investment in a CDO which include collateralized bond obligations (CBOs) and collateralized loan obligations (CLOs) depend largely on the type of collateral held by the special purpose entity (SPE) and the tranche of the CDO in which the Fund invests. Investment risk may also be affected by the performance of a CDO's collateral manager (the entity responsible for selecting and managing the pool of collateral securities held by the SPE trust), especially during a period of market volatility. CDOs may be deemed to be illiquid and subject to the Fund's restrictions on investments in illiquid investments. The Fund's investment in CDOs will not receive the same investor protection as an investment in registered securities.

In addition, prices of CDO tranches can decline considerably. In addition to the normal risks associated with debt securities and asset backed securities (e.g., interest rate risk, credit risk and default risk), CDOs carry additional risks including, but not limited to: (i) the possibility that distributions from collateral securities will not be adequate to make interest or other payments; (ii) the quality of the collateral may decline in value or quality or go into default or be downgraded; (iii) the Fund may invest in tranches of a CDO that are subordinate to other classes; and (iv) the complex structure of the security may not be fully understood at the time of investment and may produce disputes with the issuer, difficulty in valuing the security or unexpected investment results.

Marketplace Loans

Marketplace loans are subject to the risks associated with debt investments generally, including but not limited to, interest rate, credit, liquidity, high yield debt, market and income risks. Marketplace loans generally are not rated by rating agencies, are often unsecured, and are highly risky and speculative investments. Lenders and investors, such as the Fund, assume all of the credit risk on the loans they fund or purchase and there are no assurances that payments due on underlying loans will be made. The Fund may not have direct recourse against the borrower or may be otherwise limited in its ability to enforce its rights with respect to its investment in marketplace loans, particularly in the case of unsecured loans. In addition, lenders and investors are not entitled to recover any deficiency of principal or interest from the platform operator if the underlying borrower defaults on its payments due with respect to a loan. Investments in marketplace loans may be adversely affected if the platform operator or a third-party service provider becomes unable or unwilling to fulfill its obligations in servicing the loans. Moreover, the Fund may have limited information about the underlying marketplace loans and the information provided to the platform regarding the loans and borrowers' credit information may be incomplete, inaccurate or outdated. Additionally, the terms of certain loans may not restrict the borrowers from incurring additional debt. If a borrower incurs additional debt after obtaining a loan through a platform, the additional debt may adversely affect the borrower's creditworthiness generally, and could result in the financial distress, insolvency or bankruptcy of the borrower. To the extent borrowers incur other indebtedness that is secured, such as a mortgage, the ability of the secured creditors to exercise collection remedies against the assets of that borrower may impair the borrower's ability to repay its marketplace loan or it may impair the platform's ability to collect on the marketplace loan upon default. When a marketplace loan is unsecured, borrowers may choose to repay other loans before repaying a loan facilitated through a platform because the borrowers have no collateral at risk. The Fund will not be made aware of any additional debt incurred by a borrower or whether such debt is secured, which could allow other creditors to move more quickly to claim assets of the borrower. Furthermore, U.S. based marketplace lending platforms are subject to extensive regulation, which could impair the enforcement of marketplace loans, among other things.

Finally, marketplace loans are not listed on any securities exchange and an active secondary market for such loans does not currently exist and may not develop in the future. It may be difficult for the Fund to sell an investment in a loan before its maturity at the price at which the Fund believes the loan should be valued. The Fund typically considers its investments in marketplace loans to be illiquid for purposes of its limitation on illiquid investments.

Liquidity

Liquidity risk exists when the markets for particular securities or types of securities or other investments are or become

relatively illiquid so that the Fund is unable, or it becomes more difficult for the Fund, to sell the security or other investment at the price at which the Fund has valued the security. Illiquidity may result from political, economic or issuer specific events; supply/demand imbalances; changes in a specific market's size or structure, including the number of participants; or overall market disruptions. Securities or other investments with reduced liquidity or that become illiquid may involve greater risk than securities with more liquid markets. Market prices or quotations for illiquid securities may be volatile, and there may be large spreads between bid and ask prices. Reduced liquidity may have an adverse impact on market price and the Fund's ability to sell particular securities when necessary to meet the Fund's liquidity needs, which may arise or increase in response to a specific economic event or because the investment manager wishes to purchase particular investments or believes that a higher level of liquidity would be advantageous. An investment may become illiquid if the Fund and its affiliates receive material non-public information about the issuer or the investment. To the extent that the Fund and its affiliates hold a significant portion of an issuer's outstanding securities, the Fund may be subject to greater liquidity risk than if the issuer's securities were more widely held.

Investing in Underlying Investment Companies

To the extent the Fund invests in underlying investment companies, including ETFs, the Fund's performance is related to the performance of the underlying investment companies held by it. In addition, shareholders of the Fund will indirectly bear the fees and expenses of the underlying investment companies and such investments may be more costly than if the Fund had owned the underlying securities directly. In addition, the Fund pays brokerage commissions in connection with the purchase and sale of shares of ETFs.

Prepayment

Debt securities are subject to prepayment risk when the issuer can "call" the security, or repay principal, in whole or in part, prior to the security's maturity. When the Fund reinvests the prepayments of principal it receives, it may receive a rate of interest that is lower than the rate on the existing security, potentially lowering the Fund's income, yield and its distributions to shareholders. Securities subject to partial or complete prepayment(s) may offer less potential for gains during a declining interest rate environment and have greater price volatility. Prepayment risk is greater in periods of falling interest rates for fixed-rate investments, and for floating or variable rate securities, rising interest rates generally increase the risk of refinancings or prepayments.

Extension

The market value of some fixed rate debt securities (such as certain asset-backed and mortgage-backed securities) will be adversely affected when bond calls or prepayments on underlying mortgages or other assets are less or slower than anticipated, particularly when interest rates rise. When

that occurs, the effective maturity date of the Fund's investment may be extended, resulting in an increase in interest rate sensitivity to that of a longer-term instrument. Such extension may also effectively lock-in a below market interest rate and reduce the value of the debt security.

Mortgage Dollar Rolls

In a mortgage dollar roll, the Fund takes the risk that the market price of the mortgage-backed securities will drop below their future purchase price. The Fund also takes the risk that the mortgage-backed securities that it repurchases at a later date will have less favorable market characteristics than the securities originally sold (e.g., greater prepayment risk). When the Fund uses a mortgage dollar roll, it is also subject to the risk that the other party to the agreement will not be able to perform. Mortgage dollar rolls add leverage to the Fund's portfolio and increase the Fund's sensitivity to interest rate changes. In addition, investment in mortgage dollar rolls will increase the Fund's portfolio turnover rate.

Portfolio Turnover

The investment manager will sell a security or enter or close out of a derivative position when it believes it is appropriate to do so, regardless of how long the Fund has held the security. The Fund's turnover rate may exceed 100% per year because of the anticipated use of certain investment strategies. The rate of portfolio turnover will not be a limiting factor for the investment manager in making decisions on when to buy or sell securities. High turnover will increase the Fund's transaction costs and may increase your tax liability if the transactions result in capital gains.

LIBOR Transition

The Fund invests in financial instruments that may have floating or variable rate calculations for payment obligations or financing terms based on the London Interbank Offered Rate (LIBOR), which is the benchmark interest rate at which major global banks lend to one another in the international interbank market for short-term loans. It was originally anticipated that LIBOR would be discontinued by the end of 2021 and would cease to be published after that time. Although many LIBOR rates were phased out at the end of 2021 as originally intended, a selection of widely used USD LIBOR rates will continue to be published until June 2023 in order to assist with the transition. The impact of the discontinuation of LIBOR and the transition to an alternative rate on the Fund's portfolio remains uncertain. There can be no guarantee that financial instruments that transition to an alternative reference rate will retain the same value or liquidity as they would otherwise have had.

Management

The Fund is actively managed and could experience losses (realized and unrealized) if the investment manager's judgment about markets, interest rates or the attractiveness, relative values, liquidity, or potential appreciation of particular investments made for the Fund's portfolio prove to be incorrect. There can be no guarantee that these

techniques or the investment manager's investment decisions will produce the desired results. Additionally, legislative, regulatory, or tax developments may affect the investment techniques available to the investment manager in connection with managing the Fund and may also adversely affect the ability of the Fund to achieve its investment goal.

ESG Considerations

The investment manager's portfolio selection strategy is not solely based on ESG considerations, and therefore the issuers in which the Fund invests may not be considered ESG-focused companies. Consideration of ESG factors may affect the Fund's exposure to certain issuers or industries and may not work as intended. In addition, ESG considerations assessed as part of the Fund's investment process may vary across types of eligible investments and issuers, and not every ESG factor may be identified or evaluated for every investment. The investment manager's assessment of an issuer may differ from that of other funds or an investor's assessment of such issuer. As a result, securities selected by the investment manager may not reflect the beliefs and values of any particular investor. The investment manager also may be dependent on the availability of timely, complete and accurate ESG data being reported by issuers and/or third-party research providers to evaluate ESG factors. ESG factors are often not uniformly measured or defined, which could impact the investment manager's ability to assess an issuer. The Fund may underperform other funds that do not consider an issuer's ESG factors or that use a different methodology to identify and/or incorporate ESG factors.

Management

Franklin Advisers, Inc. (Advisers), One Franklin Parkway, San Mateo, California 94403-1906, is the Fund's investment manager.

The Fund is managed by a team of dedicated professionals on investments in U.S. and foreign debt securities. The portfolio managers of the Fund are as follows:

Sonal Desai, Ph.D. Executive Vice President and Director of Advisers

Dr. Desai has been a portfolio manager of the Fund since 2018. She joined Franklin Templeton in 2009.

Patricia O'Connor, CFA Vice President of Advisers

Ms. O'Connor has been a portfolio manager of the Fund since 2016. She joined Franklin Templeton in 1997.

William Chong, CFA, FRM Portfolio Manager of Advisers

Mr. Chong has been a portfolio manager of the Fund since 2019. He joined Franklin Templeton in 2008.

David Yuen, CFA, FRM Portfolio Manager of Advisers

Cybersecurity

Cybersecurity incidents, both intentional and unintentional, may allow an unauthorized party to gain access to Fund assets, Fund or customer data (including private shareholder information), or proprietary information, cause the Fund, the investment manager and/or their service providers (including, but not limited to, Fund accountants, custodians, sub-custodians, transfer agents and financial intermediaries) to suffer data breaches, data corruption or loss of operational functionality or prevent Fund investors from purchasing, redeeming or exchanging shares or receiving distributions. The investment manager has limited ability to prevent or mitigate cybersecurity incidents affecting third party service providers, and such third party service providers may have limited indemnification obligations to the Fund or investment manager. Cybersecurity incidents may result in financial losses to the Fund and its shareholders, and substantial costs may be incurred in order to prevent any future cybersecurity incidents. Issuers of securities in which the Fund invests are also subject to cybersecurity risks, and the value of these securities could decline if the issuers experience cybersecurity incidents.

Because technology is frequently changing, new ways to carry out cyber attacks are always developing. Therefore, there is a chance that some risks have not been identified or prepared for, or that an attack may not be detected, which puts limitations on the fund's ability to plan for or respond to a cyber attack. Like other funds and business enterprises, the fund, the investment manager and their service providers are subject to the risk of cyber incidents occurring from time to time.

More detailed information about the Fund and its policies and risks can be found in the Fund's SAI.

Mr. Yuen has been a portfolio manager of the Fund since 2019. He joined Franklin Templeton in 2000.

As co-lead portfolio managers of the Fund, Dr. Desai, Ms. O'Connor, Mr. Chong and Mr. Yuen are jointly and primarily responsible for the day-to-day management of the Fund's portfolio. They have equal authority over all aspects of the Fund's investment portfolio, including, but not limited to, purchases and sales of individual securities, portfolio risk assessment, and the management of daily cash balances in accordance with anticipated investment management requirements. The degree to which each portfolio manager may perform these functions, and the nature of these functions, may change from time to time.

CFA® and Chartered Financial Analyst® are trademarks owned by CFA Institute.

The Fund's SAI provides additional information about portfolio manager compensation, other accounts that they manage and their ownership of Fund shares.

The Fund pays Advisers a fee for managing the Fund's assets. For the fiscal year ended December 31, 2021, Advisers contractually agreed in advance to reduce its fee as a result of the Fund's investment in one or more Franklin Templeton affiliated funds (acquired fund), including a Franklin Templeton money fund. The investment management fees before and after such waiver for the fiscal year ended December 31, 2021, were 0.63% and 0.59%, respectively.

A discussion regarding the basis for the board of trustees approving the investment management contract of the Fund is available in the Fund's semiannual report to shareholders for the six-month period ended June 30.

Manager of Managers Structure

The investment manager and the Trust have received an exemptive order from the SEC that allows the Fund to operate in a "manager of managers" structure whereby the investment manager can appoint and replace both wholly-owned and unaffiliated sub-advisors, and enter into, amend and terminate sub-advisory agreements with such sub-advisors, each subject to board approval but without obtaining prior shareholder approval (Manager of Managers Structure). The Fund will, however, inform shareholders of the hiring of any new sub-advisor within 90 days after the hiring. The SEC exemptive order provides the Fund with greater flexibility and efficiency and alleviates the need for the Fund to incur the expense and delays associated with obtaining shareholder approval of such sub-advisory agreements.

The use of the Manager of Managers Structure with respect to the Fund is subject to certain conditions that are set forth in the SEC exemptive order. Under the Manager of Managers Structure, the investment manager has the ultimate responsibility, subject to oversight by the Fund's board of trustees, to oversee sub-advisors and recommend their hiring, termination and replacement. The investment manager will also, subject to the review and approval of the Fund's board of trustees: set the Fund's overall investment strategy; evaluate, select and recommend sub-advisors to manage all or a portion of the Fund's assets; and implement procedures reasonably designed to ensure that each sub-advisor complies with the Fund's investment goal, policies and restrictions. Subject to review by the Fund's board of trustees, the investment manager will allocate and, when appropriate, reallocate the Fund's assets among sub-advisors and monitor and evaluate the sub-advisors' performance.

Financial Highlights

This table presents the financial performance of Class 1 shares for the past five years or since inception. The table shows certain information on a single Fund share basis (per share performance). It also shows some key Fund statistics, such as total return (past performance) and expense ratios. Total return represents the annual change in value of a share assuming reinvestment of dividends and capital gains. This information has been audited by PricewaterhouseCoopers LLP. Their report, along with the Fund's financial statements, is included in the annual report, which is available upon request.

Franklin Strategic Income VIP Fund - Class 1

Year Ended December 31,

	2021*	2020	2019	2018	2017
Per share operating performance (for a share outstanding throughout the year)					
Net asset value, beginning of year	\$10.76	\$10.93	\$10.65	\$11.15	\$11.01

Additional Information, All Funds

Dealer Compensation

Franklin Distributors, LLC (Distributors) and/or its affiliates may provide financial support to securities dealers that sell shares of Franklin Templeton funds, or participate in the offering of variable insurance products that invest in the Trust (VIP Qualifying Dealers); such financial support may be made by payments from Distributors' and/or its affiliates' resources, including from Distributors' retention of underwriting concessions and, in the case of Rule 12b-1 share classes, from payments to Distributors under such plans.

Distributors makes these payments in connection with VIP Qualifying Dealers' efforts to educate financial advisors about our funds. A number of factors will be considered in determining payments, including such dealer's sales, assets and redemption rates, and the quality of the dealer's relationship with Distributors. Distributors will, on an annual basis, determine the advisability of continuing these payments. To the extent permitted by SEC and FINRA rules and other applicable laws and regulations, Distributors and/or its affiliates may pay or allow other promotional incentives or payments to dealers. Sale of shares of the Funds, as well as shares of other Franklin Templeton funds, is not considered a factor in the selection of securities dealers to execute the Funds' portfolio transactions. Accordingly, the allocation of portfolio transactions for execution by VIP Qualifying Dealers is not considered marketing support payments.

You can find further details in the SAI about the payments made by Distributors and/or its affiliates and the services provided by your VIP Qualifying Dealer. While your insurance company's fees and charges are generally disclosed in the insurance contract prospectus, your VIP Qualifying Dealer may charge you additional fees or commissions other than those disclosed in this prospectus. You can ask your insurance company and VIP Qualifying Dealer for information about any payments they receive from Distributors and/or its affiliates and any services they provide, as well as about fees and/or commissions they charge. These payments and other fees and charges are not reflected in the fee table included in this prospectus. Additional disclosure may be included in the insurance contract prospectus.

Portfolio Holdings

A description of the Trust's policies and procedures regarding the release of portfolio holdings information for each Fund of the Trust (collectively, the "Fund") is also available in the Trust's SAI. Portfolio holdings information can be viewed online at franklintempleton.com.

Statements and Reports

Contract Owners should receive financial reports for the Fund related to their Contract from the sponsoring Insurer every six months.

Administrative Services

Franklin Templeton Services, LLC (FT Services) has an agreement with the investment managers to provide certain administrative services and facilities for each Fund.

FT Services, on behalf of itself and other affiliates of the managers, makes certain payments to insurance companies out of its own resources for certain services provided to the Funds by insurance companies relating to their investment in the Funds on behalf of variable contract owners. See the SAI for more information.

Distributions and Taxes

Income and Capital Gains Distributions

As a regulated investment company, each Fund generally pays no federal income tax on the income and gains it distributes to its shareholders. Each Fund (sometimes referred to as "the Fund") intends to pay income dividends at least annually from its net investment income. Capital gains, if any, may be paid at least annually. The Fund may distribute income dividends and capital gains more frequently, if necessary, in order to reduce or eliminate federal excise or income taxes on the Fund. The amount of any distribution will vary, and there is no guarantee the Fund will pay either income dividends or capital gain distributions.

Tax Considerations

The Trust consists of multiple Funds each of which for federal income tax purposes is treated separately from any other. Each Fund expects to qualify as a regulated investment company under Subchapter M of the Internal Revenue Code of 1986, as amended (the "Code"). Accordingly, the assets, income and distributions of the Fund are considered separately for purposes of determining whether the Fund qualifies as a regulated investment company. If the Fund so qualifies, it will not be subject to federal income tax on the portion of its income and gains that it distributes to shareholders. Additionally, each Fund intends to comply with the diversification requirements imposed by Section 817(h) of the Code.

For federal income tax purposes, the insurance companies and their separate accounts are treated as the owners of the shares of the Fund selected as an investment option rather than the purchasers of a variable annuity contract or variable life insurance policy (variable contracts). In light of the tax-favored status of life insurance company separate accounts, there should be no adverse federal income tax

consequences to them as a result of their buying, holding, exchanging or selling Fund shares or on their receipt of Fund distributions, subject to applicable limitations under the Code.

Insurance companies offer variable annuity and variable life insurance products to investors including pension plans (Contracts), through separate accounts (Insurers). When shares of the Fund are investment options of Contracts, separate accounts, and not the owners of the Contracts including group contract and pension plan certificate holders (Contract Owners), are generally the shareholders of the Fund. As a result, it is anticipated that any income dividends or capital gains distributions paid by the Fund will be exempt from current taxation to the purchaser of such variable contracts if left to accumulate within a variable contract. Withdrawals from such contracts may be subject to ordinary income tax and, if such withdrawals are made before age 59 ½, a 10% penalty tax. For more information on taxes, please refer to the accompanying prospectus of the annuity or life insurance program through which shares of the Fund are underlying investment options.

Other tax information. This discussion of "Distributions and Taxes" is for general information only and is not tax advice. You should consult your own tax advisor regarding your particular circumstances and about any federal, state or local tax consequences before making an investment in a variable contract or the Fund.

Fund Account Information

Buying Shares

Insurance companies offer variable annuity and variable life insurance products to investors including pension plans (Contracts), through separate accounts (Insurers). When shares of the Fund are investment options of Contracts, separate accounts, and not the owners of the Contracts including group contract and pension plan certificate holders (Contract Owners), are generally the shareholders of the Fund. Shares of the Fund may also be purchased by other mutual funds (funds of funds).

Shares of the Fund are sold at net asset value (NAV). When sold in connection with Contracts, the Fund corresponds with the investment options offered by the Insurer to Contract Owners. The board of trustees monitors the Fund for the existence of any material irreconcilable conflicts of interest between different types of their separate account investors. If there were any such conflicts, the board of trustees will determine what action, if any, shall be taken in response. Please refer to the accompanying contract prospectus for information on how to select the Fund as an investment option.

Contract Owners' payments will be allocated by the insurance company separate account to sub-accounts that purchase shares of the Fund corresponding with the sub-account chosen by the Contract Owner, and are subject to

any limits or conditions in the contract. Requests to buy shares are processed at the NAV next calculated after we or our designees receive the request in proper form. Please refer to your Contract prospectus or other disclosure document for further information. The Fund does not issue share certificates.

Selling Shares

An Insurer that holds shares of the Fund in connection with a Contract sells shares of the Fund to make benefit or surrender payments or to execute exchanges (transfers) between investment options under the terms of the Contract.

Exchanging Shares

Contract Owners may exchange interests in sub-accounts of an insurance company separate account that corresponds with shares of any one class or Fund, for interests in sub-accounts that correspond with shares of other classes or Funds, subject to the terms and any specific limitations on the exchange (or "transfer") privilege described in the Contract prospectus.

Frequent exchanges or excessive trading can harm performance and interfere with Fund portfolio management or operations and increase Fund costs. The Funds discourage short-term or excessive trading and may seek to restrict or reject such trading (please see "Fund Account Information - Frequent Trading Policy," below).

Frequent Trading Policy

The board of trustees has adopted the following policies and procedures with respect to frequent trading (Frequent Trading Policy):

Frequent trading generally. The Fund discourages and does not intend to accommodate short-term or frequent purchases and redemptions of fund shares, often referred to as "frequent trading," and asks its Fund of Fund investors and participating Insurers for their cooperation in trying to discourage such activity in their separate accounts by Contract Owners and their financial advisors. The Fund intends to seek to restrict or reject such trading or take other action, as described below, if in the judgment of the Fund manager or transfer agent such trading may interfere with the efficient management of the Fund's portfolio, may materially increase the Fund's transaction costs, administrative costs or taxes, or may otherwise be detrimental to the interests of the Fund and its shareholders.

Frequent trading consequences. If information regarding trading activity in the Fund or in any other Franklin Templeton fund or non-Franklin Templeton fund is brought to the attention of the Fund's investment manager or transfer agent and based on that information the Fund or its investment manager or transfer agent in their sole discretion conclude that such trading may be detrimental to the Fund as described in this Frequent Trading Policy, the Fund may temporarily or permanently bar future purchases into the Fund or, alternatively, may limit the amount, number or frequency of any future purchases and/or the method by

which an Insurer or a Fund of Funds may request future purchases and redemptions (including purchases and/or redemptions by an exchange or transfer between the Fund and any other mutual fund). In determining what actions should be taken, the Fund's transfer agent may consider a variety of factors, including the potential impact of such remedial actions on the Fund or its shareholders. If the Fund is a "fund of funds," the Fund's transfer agent may take into account the impact of the trading activity and of any proposed remedial action on both the Fund and the underlying funds in which the Fund invests.

In considering trading activity, the Fund may consider, among other factors, trading history both directly and, if known, through financial intermediaries, in the Fund, in other Franklin Templeton funds, in non-Franklin Templeton mutual funds, or in accounts under common control or ownership.

Frequent trading through Insurers. As a Contract Owner you are also subject to this policy. An Insurer's order for purchases and/or redemptions pursuant to a Contract Owner's instructions (including purchases and/or redemptions by an exchange or transfer between the Fund and any mutual fund) are submitted pursuant to aggregated orders (Aggregated Orders). A fund of fund's order for purchases and/or redemptions pursuant to its investors' instructions are also submitted pursuant to Aggregated Orders. While the Fund will encourage Insurers and funds of funds to apply the Fund's Frequent Trading Policy to their investors, the Fund is limited in its ability to monitor the trading activity or enforce the Fund's Frequent Trading Policy because Insurers and funds of funds have the relationships with, and are responsible for maintaining the account records of, the individual investors. For example, should it occur, the Fund may not be able to detect frequent trading that may be facilitated by financial intermediaries or made difficult to identify in the Aggregated Orders used by Insurers and Fund of Fund investors.

Therefore, the Fund or its agent selectively monitor the Aggregated Orders used by Insurers and Fund of Fund investors for purchases, exchanges and redemptions in respect of all their investors and seek the cooperation of Insurers and Fund of Fund investors to apply the Fund's Frequent Trading Policy. There may be legal and technological limitations on the ability of an Insurer or Fund of Fund to impose trading restrictions and to apply the Fund's Frequent Trading Policy to their investors through such methods as implementing short-term trading limitations or restrictions, assessing the Fund's redemption fee (if applicable) and monitoring trading activity for what might be frequent trading. As a result, the Fund may not be able to determine whether trading by Insurers or funds of funds in respect of their investors is contrary to the Fund's Frequent Trading Policy.

Risks from frequent trading. Depending on various factors, including the size of the Fund, the amount of assets the portfolio manager typically maintains in cash or cash equivalents and the dollar amount and number and frequency of trades and the types of securities in which the

Fund typically invests, short-term or frequent trading may interfere with the efficient management of the Fund's portfolio, increase the Fund's transaction costs, administrative costs and taxes and/or impact Fund performance.

In addition, if the nature of the Fund's portfolio holdings exposes the Fund to "arbitrage market timers," the value of the Fund's shares may be diluted if redeeming shareholders receive proceeds (and buying shareholders receive shares) based upon net asset values which do not reflect appropriate fair value prices. Arbitrage market timing occurs when an investor seeks to take advantage of the possible delay between the change in the value of a mutual fund's portfolio holdings and the reflection of the change in the fund's net asset value per share. A fund that invests significantly in foreign securities may be particularly vulnerable to arbitrage market timing. Arbitrage market timing in foreign investments may occur because of time zone differences between the foreign markets on which the Fund's international portfolio securities trade and the time as of which the Fund's NAV is calculated. Arbitrage market timers may purchase shares of the Fund based on events occurring after foreign market closing prices are established, but before calculation of the Fund's NAV. One of the objectives of the Trust's fair value pricing procedures is to minimize the possibilities of this type of arbitrage market timing (please see "Fund Account Information - Valuation - Foreign Securities – Potential Impact of Time Zones and Market Holidays").

Since the Fund may invest significantly in securities that are, or may be, restricted, unlisted, traded infrequently, thinly traded, or relatively illiquid (relatively illiquid securities), the Fund may be particularly vulnerable to arbitrage market timing. An arbitrage market timer may seek to take advantage of a possible differential between the last available market prices for one or more of these relatively illiquid securities that are used to calculate the Fund's net asset value and the latest indications of market values for those securities. One of the objectives of the Fund's fair value pricing procedures is to minimize the possibilities of this type of arbitrage market timing (please see "Fund Account Information - Fair Valuation – Individual Securities" under the heading "Fund Account Policies", below).

The Fund is currently using several methods to reduce the risk of frequent trading. These methods include:

- seeking the cooperation of Insurers and funds of funds to assist the Fund in identifying potential frequent trading activity;
- committing staff to selectively review on a continuing basis recent trading activity in order to identify trading activity that may be contrary to the Fund's Frequent Trading Policy;
- monitoring potential price differentials following the close of trading in foreign markets to determine whether the application of fair value pricing procedures is warranted; and

- seeking the cooperation of financial intermediaries to assist the Fund in identifying frequent trading activity.

Though these methods involve judgments that are inherently subjective and involve some selectivity in their application, the Fund seeks to make judgments and applications that are consistent with the interests of the Fund's shareholders. There is no assurance that the Fund or its agents will gain access to any or all information necessary to detect frequent trading in Insurers' separate accounts. While the Fund will seek to take actions (directly and with the assistance of Insurers) that will detect frequent trading, it cannot represent that such trading activity can be minimized or completely eliminated.

Revocation of frequent trading trades. Transactions placed in violation of a Fund's Frequent Trading Policy or exchange limit guidelines are not necessarily deemed accepted by the Fund and may be cancelled or revoked by the Fund, in full or in part, as soon as practicable following receipt by the Fund and prompt inquiry of the intermediary.

Involuntary Redemptions

The Fund reserves the right to close an account (and involuntarily redeem any investment) if it is deemed to have engaged in activities that are illegal (such as late trading) or otherwise believed to be detrimental to the Fund (such as frequent trading), to the fullest extent permitted by law and consistent with the best interests of the Fund and its shareholders. Thus, for example, if upon inquiry the Fund and insurance company identify a contract owner that has engaged in late trading or frequent trading activities, the Fund may advise the insurance company that it will not accept future investments, or is redeeming any investment related to that contract owner. Involuntary redemptions may be in cash or in kind.

Fund Account Policies

CALCULATING SHARE PRICE

When they buy and sell shares, the Fund's shareholders pay and receive the net asset value (NAV) per share.

The value of a mutual fund is determined by deducting the fund's liabilities from the total assets of the portfolio. The NAV per share of a class of the Fund is determined by dividing the net asset value of the Fund's share class by the applicable number of shares outstanding of that share class. The Fund's NAV does not include any fee or sales charge imposed by variable insurance contracts for which the Fund is an investment option or funds of funds that purchase shares of the Fund. Investors should consult the contract prospectus, disclosure document or Fund of Funds prospectus for more information.

The Fund calculates the NAV per share each business day as of 1 p.m. Pacific time or the regularly scheduled close of the New York Stock Exchange (NYSE), whichever is earlier. The Fund does not calculate the NAV on days the NYSE is closed for trading, which include New Year's Day, Martin Luther King Jr. Day, President's Day, Good Friday, Memorial

Day, Juneteenth National Independence Day, Independence Day, Labor Day, Thanksgiving Day and Christmas Day. If the NYSE has a scheduled early close, the Fund's share price would be determined as of the time of the close of the NYSE. If, due to weather or other special or unexpected circumstances, the NYSE has an unscheduled early close on a day that it has opened for business, the Fund reserves the right to consider that day as a regular business day and accept purchase and redemption orders and calculate its share price as of the normally scheduled close of regular trading on the NYSE.

When determining the NAV, the Fund values cash and receivables at their realizable amounts, and records interest as accrued and dividends on the ex-dividend date. The Fund generally utilizes two independent pricing services to assist in determining a current market value for each security. If market quotations are readily available for portfolio securities listed on a securities exchange (including exchange-traded funds), the Fund values those securities at the last quoted sale price or the official closing price of the day, respectively, or, if there is no reported sale, within the range of the most recent quoted bid and ask prices. The Fund values over-the-counter portfolio securities within the range of the most recent bid and ask prices. If portfolio securities trade both in the over-the-counter market and on a stock exchange, the Fund values them according to the broadest and most representative market. Prices received by the Fund for securities may be based on institutional "round lot" sizes, but the Fund may hold smaller, "odd lot" sizes. Odd lots may trade at lower prices than round lots.

Generally, trading in corporate bonds, U.S. government securities and money market instruments is substantially completed each day at various times before 1 p.m. Pacific time. The value of these securities used in computing the NAV is determined as of such times. Occasionally, events affecting the values of these securities may occur between the times at which they are determined and 1:00 p.m. Pacific time that will not be reflected in the computation of the NAV. The Fund relies on third party pricing vendors to provide evaluated prices that reflect current fair market value at 1 p.m. Pacific time.

To the extent that a Fund is invested in one or more open-end investment management companies (mutual funds), the Fund values shares of a mutual fund at the mutual fund's last determined NAV.

FAIR VALUATION - INDIVIDUAL SECURITIES

Since the Fund may invest in securities that are restricted, unlisted, traded infrequently, thinly traded, or relatively illiquid, there is the possibility of a differential between the last available market prices for one or more of those securities and the latest indications of market values for those securities. The Fund has procedures, approved by the board of trustees, to determine the fair value of individual securities and other assets for which market prices are not readily available (such as certain restricted or unlisted securities and private placements) or which may not be

reliably priced (such as in the case of trade suspensions or halts, price movement limits set by certain foreign markets, and thinly traded or illiquid securities). Some methods for valuing these securities may include: fundamental analysis (earnings multiple, etc.), matrix pricing, discounts from market prices of similar securities, or discounts applied due to the nature and duration of restrictions on the disposition of the securities. The board of trustees oversees the application of fair value pricing procedures.

The application of fair value pricing procedures represents a good faith determination based upon specifically applied procedures. There can be no assurance that the Funds could obtain the fair value assigned to a security if they were able to sell the security at approximately the time at which a Fund determines its NAV per share.

SECURITY VALUATION - U.S. PASS-THROUGH SECURITIES, CMO, ABS, MBS

Mortgage pass-through securities (such as Ginnie Mae, Fannie Mae and Freddie Mac), other mortgage-backed securities (MBS), collateralized mortgage obligations (CMOs) and asset-backed securities (ABS), generally trade in the over-the-counter market rather than on a securities exchange. The Fund may value these portfolio securities by utilizing quotations from bond dealers, information with respect to bond and note transactions and may rely on independent pricing services. The Fund's pricing services use valuation models or matrix pricing to determine current value. In general, they use information with respect to comparable bond and note transactions, quotations from bond dealers or by reference to other securities that are considered comparable in such characteristics as rating, interest rate, maturity date, option adjusted spread models, prepayment projections, interest rate spreads and yield curves. Matrix pricing is considered a form of fair value pricing.

SECURITY VALUATION - CORPORATE DEBT SECURITIES

Corporate debt securities generally trade in the over-the-counter market rather than on a securities exchange. The Fund may value these portfolio securities by utilizing quotations from bond dealers, information with respect to bond and note transactions and may rely on independent pricing services to assist in determining a current market value for each security. The Fund's pricing services uses independent quotations from bond dealers and bond market activity to determine current value.

SECURITY VALUATION - SENIOR SECURED CORPORATE LOANS

Senior secured corporate loans with floating or variable interest rates generally trade in the over-the-counter market rather than on a securities exchange. The Fund may value these portfolio securities by utilizing quotations from loan dealers and other financial institutions, information with respect to bond and note transactions and may rely on independent pricing services to assist in determining a

current market value for each security. These pricing services may utilize independent market quotations from loan dealers or financial institutions and may incorporate valuation methodologies that incorporate multiple bond characteristics. These characteristics may include dealer quotes, issuer type, coupon, maturity, weighted average maturity, interest rate spreads and yield curves, cash flow and credit risk/quality analysis.

SECURITY VALUATION – MUNICIPAL SECURITIES – MATRIX PRICING (FAIR VALUATION)

Municipal securities generally trade in the over-the-counter market rather than on a securities exchange. The Fund's pricing services use valuation models or matrix pricing to determine current value. In general, they use information with respect to comparable bond and note transactions, quotations from bond dealers or by reference to other securities that are considered comparable in such characteristics as rating, interest rate and maturity date. Matrix pricing is considered a form of fair value pricing.

SECURITY VALUATION - OPTIONS

The Fund values traded call options at their market price as determined above. The current market value of any option the Fund holds is its last sale price on the relevant exchange before the Fund values its assets. If there are no sales that day or if the last sale price is outside the bid and ask prices, the Fund values options within the range of the current closing bid and ask prices if the Fund believes the valuation fairly reflects the contract's market value.

VALUATION - FOREIGN SECURITIES - COMPUTATION OF U.S. EQUIVALENT VALUE

The Fund generally determines the value of a foreign security as of the close of trading on the foreign stock exchange on which the security is primarily traded, or as of 1 p.m. Pacific time, if earlier. The value is then converted into its U.S. dollar equivalent at the foreign exchange rate in effect at 1 p.m. Pacific time on the day that the value of the foreign security is determined. If no sale is reported at that time, the foreign security will be valued within the range of the most recent quoted bid and ask prices. Occasionally events (such as repatriation limits or restrictions) may impact the availability or reliability of foreign exchange rates used to convert the U.S. dollar equivalent value. If such an event occurs, the foreign exchange rate will be valued at fair value using procedures established and approved by the board of trustees.

VALUATION – FOREIGN SECURITIES – POTENTIAL IMPACT OF TIME ZONES AND MARKET HOLIDAYS

Trading in securities on foreign securities stock exchanges and over-the-counter markets, such as those in Europe and Asia, may be completed before 1 p.m. Pacific time on each day that the Fund is open. Occasionally, events occur between the time at which trading in a foreign security is completed and 1 p.m. Pacific time that might call into question the availability (including the reliability) of the value

of a foreign portfolio security held by the Fund. As a result, the Fund may be susceptible to what is referred to as “time-zone arbitrage.” Certain investors in the Fund may seek to take advantage of discrepancies in the value of the Fund’s portfolio securities as determined by the foreign market at its close and the latest indications of value attributable to the portfolio securities at the time the Fund’s NAV is computed. Trading by these investors, often referred to as “arbitrage market timers,” may dilute the value of the Fund’s shares, if such discrepancies in security values actually exist. To attempt to minimize the possibilities for time-zone arbitrage, and in accordance with procedures established and approved by the Fund’s board of trustees, the investment manager monitors price movements by using a fair value pricing service offered through an independent pricing vendor.

The fair value pricing service is used to estimate the price of a security in a liquid market at the time of the NAV calculation (1 p.m. Pacific Time). If certain criteria are met, the foreign securities may be valued using the price from the fair value pricing services. The intended effect of applying fair value pricing is to compute an NAV that accurately reflects the value of the Fund’s portfolio at the time that the NAV is calculated, to discourage potential arbitrage market timing in Fund shares, to mitigate the dilutive impact of such attempted arbitrage market timing and to be fair to purchasing, redeeming and existing shareholders. However, the application of fair value pricing procedures may, on occasion, worsen rather than mitigate the potential dilutive impact of shareholder trading.

In addition, trading in foreign portfolio securities generally, or in securities markets in a particular country or countries, may not take place on every Fund’s business day. Furthermore, trading takes place in various foreign markets on days that are not business days for the Funds, and on which the Fund’s NAV is not calculated (in which case, the NAV of the Fund’s shares may change on days when shareholders will not be able to purchase or redeem Fund shares). Thus, the calculation of the Fund’s NAV does not take place contemporaneously with the determination of the prices of many of the foreign portfolio securities used in the calculation. If events affecting the last determined values of these foreign securities occur, the securities will be valued at fair value determined in good faith in accordance with the Fund’s fair value procedures established and approved by the board of trustees (as described above).

SHARE CLASSES

Class 1, Class 2, Class 4 and Class 5 shares of the Funds are identical except that Class 2, Class 4 and Class 5 each have a distribution plan or “rule 12b-1” plan, as described in their respective prospectuses for Class 2, Class 4 and Class 5 shares.

Subject to applicable law, the board of trustees may from time to time, without the approval, vote or consent of shareholders of the Fund or any class, combine, merge or otherwise consolidate the shares of two or more classes of shares of the Fund with and/or into a single class of shares

of the Fund, with such designation, preference, conversion or other rights, voting powers, restrictions, limitations as to dividends, qualifications, terms and conditions of redemption and other characteristics as the board of trustees may determine. Such transactions may be effected through share-for-share exchanges, transfers or sales of assets, shareholder in-kind redemptions and purchases, exchange offers, or any other method approved by the board of trustees.

REDEMPTIONS

Typically, the Fund uses cash and cash equivalents held in its portfolio or sells portfolio assets to meet all redemption needs. In unusual circumstances or under stressed market conditions, the Fund may use other methods to meet redemptions, such as the use of lines of credit or interfund lending in reliance on exemptive relief from the SEC.

ADDITIONAL POLICIES

Please note that the Fund maintains additional policies and reserves certain rights, including:

- The Fund may restrict, reject or cancel any purchase orders, including an exchange request.
- Typically, redemptions are processed by the next business day provided the redemption request is received in proper form and good order, but may take up to seven days to be processed if making immediate payment would adversely affect the Fund or there is another cause for delay (for example, if you sell shares recently purchased, proceeds may be delayed until your check, draft or wire/electronic funds transfer has cleared). In certain circumstances, however, the Fund may not have the ability to delay a redemption request or may not have the time to determine whether a particular redemption would have an adverse effect on the Fund before the redemption request is paid.
- At any time, the Fund may establish or change investment minimums.
- The Fund may make material changes to or discontinue the exchange privilege on 60 days’ notice to insurance company or Fund of Fund shareholders, or as otherwise provided by law.
- Purchases of shares of the Fund (including the purchase side of an exchange) may be made only when such shares are eligible for sale in the appropriate state or jurisdiction.
- In unusual circumstances, we may temporarily suspend redemptions or postpone the payment of proceeds, as allowed by federal securities laws.
- For redemptions over a certain amount, the Fund may, but is not required to, pay redemption proceeds in securities or other assets rather than cash (also known as a redemption in-kind) if the investment manager determines it is in the best interest of the Fund,

consistent with applicable law. The investment manager will, in its sole discretion, determine whether a redemption in-kind will be considered for a particular redemption request or type of redemption request. In certain circumstances, however, the investment manager may not have the ability to determine whether a particular redemption could be paid in-kind before the redemption request is paid. If a redemption request is redeemed in-kind, investors should expect to incur transaction costs upon the disposition of the securities received in the distribution.

- To permit their investors to obtain the current price, participating insurance companies and funds of funds are responsible for transmitting all orders to the Fund promptly.

Questions

More detailed information about the Trust and the Fund's account policies can be found in the Fund's SAI. If you have any questions about the Fund, you can write to us at One Franklin Parkway, P.O. Box 7777, San Mateo, CA 94403-7777. You can also call us at 1-800/362-6243 (a toll-free number). For your protection and to help ensure we provide you with quality service, all calls may be monitored or recorded.

For More Information

For information on the Fund, including a free copy of the Fund's prospectus and Statement of Additional Information, and the Fund's Annual and Semiannual Reports, contact your financial advisor or the insurance company offering your Contract.

Shares of the insurance funds of Franklin Templeton Variable Insurance Products Trust (FTVIPT) are not offered to the public; they are offered and sold only to: (1) insurance company separate accounts to serve as the underlying investment vehicles for variable contracts; (2) certain qualified plans; and (3) other mutual funds (funds of funds).

Not all Funds and classes are available in all Contracts. For information on the terms of investment in a Contract, please consult the Contract prospectus that accompanies this Fund prospectus.

You can learn more about the Fund in the following documents:

Annual/Semiannual Fund Reports to Shareholders

Include a discussion of recent market conditions and Fund strategies that significantly affected Fund performance during its last fiscal year, financial statements, detailed performance information, portfolio holdings and, in the annual report only, the Independent Registered Public Accounting Firm's report.

Statement of Additional Information (SAI)

Contains more information about the Fund, its investments, policies, and risks. It is incorporated by reference into (is legally a part of) this prospectus.

Reports and other information about the Fund are available on the EDGAR database on the SEC's website at www.sec.gov, and copies of this information may be obtained, after paying a duplicating fee, by electronic request at the following e-mail address: publicinfo@sec.gov.
