A Flexible Premium Variable Life Insurance Product
issued by
Pacific Life Insurance Company

Variable universal life (VUL) insurance's primary objective is to provide death benefit protection with the opportunity for you to allocate your net premium payments and policy cash values among a selection of investment options.

Pacific Life's VUL products may offer a variety of variable investment options in the following investment categories:

- Asset Allocation
- Domestic Equity
- Fixed Income
- International Equity
- Money Market
- Sector

Work with your life insurance producer to determine a mix of investment options that can help you meet your life insurance and financial goals.

Each variable investment option invests in a corresponding fund of the DFA Investment Dimensions Group Inc., Fidelity® Variable Insurance Products Funds, Pacific Select Fund, or Vanguard Variable Insurance Fund.

Although some funds may have names of investment goals/objectives that resemble retail mutual funds managed by the fund managers, these funds will not have the same underlying holdings or performance as the retail mutual funds.

Important information about the performance report

Performance information for each of the underlying funds is provided by the respective fund groups. Performance for some of the underlying funds predate their availability in a Pacific Life VUL separate account.

The underlying funds are subject to market fluctuation, investment risk, and possible loss of principal. When redeemed, the value of accumulation units may be worth more or less than the original cost.

The fund performance in this report include only fund level fees and expenses, reinvestment of dividends, and distributions. Performance **does not** include any policy charges. Performance would be significantly lower after all policy fees and expenses are deducted. Policy charges are deducted monthly. The policy charges may include, but are not limited to, Cost of Insurance charges, administrative charges, asset charge, coverage charges, and any rider charges. Additionally, a premium load is deducted from each premium payment. Policy performance would be significantly lower after all policy fees and expenses are deducted and policy cash values could be less than total premiums paid. You are encouraged to ask your life insurance producer for a personalized illustration since policy charges can vary by product. To help you understand how the policy charges affect your policy cash values, you may select the Policy Charges report with your illustration. See the applicable product prospectus for more information. Call (800) 800-7681 for the Fixed Account rates.

What you will find in the report

This report provides you and your life insurance producer with a snapshot of performance on the underlying funds for our VUL products. It shows performance data, if available, over the following periods; 1-month, year-to-date, 1-year, 3-years, 5-years, 10-years, and as of a fund's inception date (ITD). The report also includes a fund's inception date and annual fund operating expense.

The funds are listed alphabetically within their Morningstar categories and the categories are listed in order of risk by asset class. Generally, portfolios of fixed income securities are less aggressive than portfolios of equity securities. While fixed income portfolios tend to be less aggressive, they still carry a variety of risks, and some will have more risks than others. Please see the **About Risks** section for more information.
